CONCISE AND PLAIN DIRECTIONS FOR THE PRONUNCIATION OF WORDS,

Consistently with the plan adopted in this Dictionary.

RULE I. A single accent (thus') marks the syllable on which the principal stress or emphasis is to be laid.

II. When the accent is placed immediately after a vowel, as in *fá'mous, lé'ver, mí'ndful, nó'ble, pu'gilist, cy'press*, it denotes that the vowel has its long sound: on the contrary, when the accent is placed immediately after a consonant, as in *fán'ism, lé'cel, mí'litary, nó'minal, pu'n'ish, sy'n'inge*, it indicates that the sound of the vowel is short; but, in every instance, the syllable so marked is the emphatic one.

III. When a double accent (thus'') is used, the object is to show, that the consonant before which it is placed coalesces in the pronunciation with the vowel following it, and renders the preceding vowel short; as in *addi'tion, ví'cious, capá'city, a'gitate, ra'tional*; which are pronounced as if written *addish'kon, vish'us, capás'ity, ad'jitate, rash'onal*.

IV. *C* before *a, o,* and *u,* is sounded like *k*; before *e, i,* and *y,* its sound is equivalent to *s* in *secret, size, sympathy*; as *cé'dar, cem'étery, cí'ron, cyl'inder*.

V. *E final* generally indicates that the preceding vowel is long, as in *hate, scene, nice, rabe, rude, tyre*; but this is not always the case, as may be instanced in *glove, live, give*. In words ending with *ble, cle, dle, fle, gle, kle, ple, tle,* and *zle,* the final *e* is silent; thus, *able* is pronounced *á'bl*; *ladle, la'dl,* &c.

VI. *Gh* at the beginning of words sound like the hard *g,* as in *ghostly*; but they are usually silent both in the middle and at the end of words; as in *bought, right, thought, sigh, highness*. In some words, however, they are sounded like *f,* as in *cough, trough, enough*.

VII. There are several consonants which in certain situations are quite mute; as, for example, *g* before *n,* in *guaw, gnat, gnome, sign,* pronounced *naw, nat, none, sine—k* before *n,* as in *know, knit,* pronounced *no, nit—l* before *k,* as in *walk, talk, could, would,* pronounced *wauk, tauk, cood, wood—b* before *t* and after *m,* as in *debt,* pronounced *det,* and *dumb,* pronounced *dum—h* after *r,* as in *rhyme,* pronounced *rime—u* after *m,* at the end of a syllable, as in *hymn, condemn,* pronounced *him, condem—p* before *s* and *t,* as in *psalm, Ptolemy,* pronounced *saam, tolemy—*and *w* before *r,* as in *wring, wreath,* pronounced *ring, reath*.

VIII. *Wh* at the beginning of a word have their position reversed as regards the pronunciation; as in *what, whiff,* where the aspirate *h* sounds as though it came before the *w,* thus, *hwat, hwiff*. In a few instances, however, the sound of the *w* is wholly lost; as in *who, whom, whole,* which are pronounced *hoo, hoom, hole*.

IX. When *ph* meet, they have the sound of *f*; as in *philosopher, philanthropy*.

X. The termination *ous* takes the sound of *us* in the numerous adjectives that are so formed; as in *gracious, glorious, pompous, precious*.

XI. *Ce, ei,* and *ti,* before a vowel, have each the sound of *sh*; as in *sebaceous, audacious, motionless,* pronounced *sebashus, audashus, moshuntless*.

The above "concise and plain directions" are intended as general Rules for pronunciation—not by any means as furnishing a perfect key to the orthoepy of the English language. Exceptions are to be found in all rules; and in the various combinations of letters many nice distinctions of sound may be discovered, which can only be learned by the ear. What is here laid down, however, may serve to assist the tyro, for whose use it is penned; while its pretensions are so humble, that it is not likely to offend the eye of the more accomplished scholar.

The country is mountainous, but in the vales the soil is fertile. The rainy season continues from April to September, and is succeeded by a cloudless sky and a vertical sun; but cold nights follow these scorching days. No country in the world produces a greater variety of quadrupeds, both wild and tame. The religion of the country is a mixture of Judaism and of the Christianity of the Greek Church; and the language bears a great affinity to the Arabic. The government is legally a despotism, but in an unsettled state; for the power of the neguz, or emperor, is very weak, and the ras, or prince of the empire, and the chiefs of the provinces, are generally at enmity with one another. The Abyssinians are of a dark olive complexion; their dress is a light robe, bound with a sash, and the head covered with a turban. They are fond of raw beef at their feasts, and eat it while the blood is yet warm from the slaughtered animal. The houses are of a conical form, neatly built of clay, and covered with thatch; and even the churches are of a round form, encircled by a portico. It is the ancient Ptolemais, and stands on a plain, near the mouth of the Kardanah, or ancient Belus. Here are seven mosques, four churches, and two synagogues. Its port has been at all times the key to Palestine; and, though now a bad one, is better than any other along the coast. The chief articles of commerce are cotton, cattle, corn, olives, and linseed, and rice brought from Egypt. In the time of the crusades, Acre underwent several sieges; and little is now to be seen of the ancient city, but the remains of buildings constructed in the earliest ages. The new city is distant a mile from the ancient walls, and is fortified by a wall and ditch. In 1799, it withstood a siege by the French under Buonaparte, who retreated after failing in a twelfth assault. During its siege by Ibrahim Pacha in 1832, its public buildings and fortifications were mostly destroyed; but it was afterwards repaired, and the latter rendered stronger than ever. But it was doomed to still greater devastation in 1841, being bombarded by the allied British and Turkish fleets under the command of Sir R. Stopford and Commodore Napier, when a shot from one of the British ships fell into the enemy's powder magazine, which exploded, causing a frightful destruction of human life, and the demolition of a great part of the fortifications. Aden, a sea-port town of Arabia, the cap. of a state of that name in Yemen. Lon. 45.14 E., lat. 12.45 N. This town, or one occupying its site, was known to the Greeks as the channel through which the treasures of India were conveyed to the coast of Egypt. It is now greatly decayed, "but it is understood," says Mr. McCulloch, "that the town and the peninsula on which it is built have been ceded to the E. I. Company, who intend making it a depot and halting-place for the steamers employed in the passage between Bombay and Suez." Affghanistan, a country of central Asia, 600 miles long, and 300 broad. The inhabitants have no written character, and speak a language peculiar to themselves; they are a hardy robust race of men, and their manners partake of a barbarous insolence; they avow a fixed contempt for the occupations of civil life, and are esteemed the most negligent of religious observances of all the Mahomedans. The principal cities are Candahar and Cabul. The disasters which befel our brave troops there in 1841, through the inhuman treachery of Akbar Khan, and the signal retribution which subsequently took place, have invested the name of this country with no common interest.

Africa, one of the grand divisions of the world. It is a peninsula of prodigious extent, and joined to Asia by the Isthmus of Suez, which is 125 miles across. In its greatest length, from the most northern part to the Cape of Good Hope, it is 4600 miles, and in the broadest part, from Cape Verd to Cape Guardafui, it is 4100. The greater part of Africa lies within the torrid zone, which renders the heat almost insupportable in many places; but the coasts in general are very fertile, the fruits excellent, and the plants extraordinary. There are more wild beasts here than in any other part of the world; also some animals peculiar to this country, as the hippopotamus, or river horse, the rhinoceros, and the beautiful striped zebra. Besides these, there are crocodiles, ostriches, camels, and many other animals not to be met with in Europe. There are several deserts, particularly one of a large extent, called Sahara; but these are not entirely without inhabitants. The principal rivers are the Nile, Niger, Zaire, Senegal, and Gambia. The most considerable mountains are the Atlas, the Mountains of the Moon, and the Sierra Leone. The inhabitants consist of Pagans, Mahomedans, and Christians; the first, who possess the greatest part of the country, are the most numerous, and generally black; the Mahomedans, who are tawny, possess Egypt and the coast of Barbary; and the people of Abyssinia are denominated Christians, though they retain many Pagan and Jewish rites. The principal divisions of Africa are Barbary, Egypt, Sahara, Nigritia, Guinea, Bornou, Cassina, Fezzan, Timbuctoo, Nubia, Abyssinia, Abex, Loango, Congo, Angola, Benguela, Mataman, Zanguebar, Monocmugi, Caffraria, and the country of the Hottentots. Although much has been done of late years, by various enterprising British travellers to explore central Africa, a great mass of unknown territory still remains in as great obscurity as ever.

Salt of the best quality is produced in abundance from rocks and various sources of salt water; and immense quantities of coral are procured along the coast. The principal river is the Shellif. Algiers was lately a republic under the protection of Turkey, and governed by a Dey; but it is now under the domination of the French, who attacked and took the city of Algiers in 1830, and have since extended their conquest to the greater part of the Algerine territory. The complexion of the natives is tawny, and they are strong and well made. Their religion is Mahomedanism, and their language a dialect of the Arabic.—**Algiers**, the capital of the province and whole country of Algiers, is a powerful city, built on the side of a hill, next the harbour; and the houses appearing one above another, of a resplendent whiteness, make a fine appearance from the Mediterranean. The hilly country around is adorned with gardens and villas, orange and olive groves, and numerous vineyards. The city of Algiers for ages braved the resentment of the most powerful states in Christendom for its piracies, and sending into slavery the crews of all Christian vessels that were taken. The emperor Charles V. lost a fine fleet and army in an engagement against it in 1541; the English burned the vessels in the harbour in 1670 and 1683; it was bombarded by the French in 1688; in 1775, the Spaniards made a descent near the city with a formidable army; and, in 1784, a powerful fleet attacked the forts that defend the harbour, both of which were repelled with great slaughter. In 1816, however, a formidable British fleet under the command of Lord Exmouth, destroyed the

America, one of the five grand divisions of the world, and next to Asia, the largest. It was first discovered in 1492, by Christoval Colon, a Genoese, better known by the name of Christopher Columbus. America is emphatically styled *the New World*, and with some degree of propriety, for, independently of its vast extent, it was observed that not only the men, but the birds and beasts, differed in some respects from those known before. All the distinguishing features of the American continent, its rivers, lakes, mountains, plains, cataracts, and forests, seem to be formed on the most gigantic scale. The natives are of a red copper colour, and they have no beards, or hair on any part of their bodies, except their heads, where it is black, straight, and coarse. The length of America is so great, that it takes in the torrid zone, the two temperate zones, and part of the frigid zone. In the most northern and southern parts, the countries are cold, sterile, and desert; while in the centre are found the richest metals, minerals, precious stones, and abundance of valuable and useful commodities. This vast continent is divided into North and South America, which are joined by the Isthmus of Panama. It has lofty and immense ranges of mountains, such as the Andes and Allegany; and the most stupendous rivers, such as the Amazon, Plata, Orinoco, Mississippi, and Missouri; besides numerous immense lakes of fresh water. The republic of the United States, in North America,

Including the territory lately purchased by them of the Indians, is nearly 3000 miles in length, and in some parts 1200 miles in width. Until the year 1776, when they declared themselves independent, they belonged to Great Britain: the first colony, that of Virginia, having been planted by Sir Walter Raleigh in the reign of Elizabeth; and, though settlers from other European countries have from time to time been naturalised there, by far the greater part are descendants of the British colonists; and the English language is consequently spoken throughout that large, powerful, and rapidly increasing country. In North America, Britain possesses New Britain, Canada, Nova Scotia, and New Brunswick; Spain formerly had Mexico, New Mexico, New Albion, and California; and Russia has some settlements on Cook Inlet. In South America, Spain also possessed Caracas, New Grenada, Peru, Chili, and Buenos Ayres; Portugal had Brazil, and part of Guiana; and France, Britain, and Holland have the remainder of Guiana. The Spanish colonies have now asserted their independence, and contain Mexico, Columbia, Chili, and the United Provinces, including Peru and Buenos Ayres; but from the commencement of the revolutionary struggles in 1810 to the present time, few, if any, of them seem to have acquired that degree of stability necessary to ensure their permanence.

Arabia Deserta lies east of Arabia Petrea, and is for the most part desert. Arabia Felix is to the south of Arabia Deserta, between the Red Sea, the Indian Ocean, and the Persian Gulf; it is the greatest division, and, though the centre is occupied by very dry deserts, there are many rich provinces on the coasts, producing a variety of fruit, honey, wax, cinnamon, cassia, manna, spike-nard, frankincense, myrrh, and coffee, of which latter prodigious quantities are exported. The Arabs are of a middle stature and brown complexion, and have always a grave and melancholy air, which, aided by the imposing aspect of their beards, gives a dignity to their manner that is very striking. They live amicably, in tribes, are very abstemious, consider hospitality as a religious duty, and act with kindness to their slaves and inferiors. They derive their subsistence from their flocks, from hunting, and from what they acquire by plunder; they acknowledge no sovereign but the emir, or leading sheik of their tribe, who is their natural prince, and to whom they pay implicit obedience. The dress of the Arabs

consists of a white robe, bound with a leather girdle, and drawers made of linen; they wear a kind of red cap, and sometimes slippers, but generally half-boots, in order to be ready to get on horseback. Its forests are large and productive; its mines of coal, iron, copper, &c. furnish employment for a great number of workmen; and its quarries of stone and slate are a source of considerable wealth. Their huts are higher and more commodious than those of the Hottentots, and their lands more fertile. Canada, a large country of North America, discovered in 1497, and settled by the French in 1608. It was conquered by the English in 1759, and confirmed to them by the French at the peace of 1763. In 1791 this country was divided into two provinces, Upper and Lower Canada, which have since been again united: some distinction, however, is still made between them, the lower being called East, and the upper West Canada. The climate is subject to great extremes of heat and cold, the winter being particularly severe. Amongst the wild animals are the American elk, the fallow deer, wolf, fox, racoon, beaver, buffalo, and roebuck. Great quantities of timber are found in the forests, and most of the pulse, fruits, and vegetables cultivated in England are also grown here.

Canals—*Duke of Bridgewater's*, in England, the first grand work of the kind in the kingdom, begun in 1758. It commenced at Worsley, seven miles from Manchester, where a basin is cut, which serves as a reservoir to the navigation. The canal rises under a hill from this basin, about 1300 yards, to the coal works. At Barton Bridge is an aqueduct, which conveys the canal across a valley and the river Irwell. At Longford Bridge it turns to the right, and, crossing the river Mersey, passes near Altringham, Dunham, and Grapenhall, into the tide-way of the Mersey, at Runcorn Gap, where barges can come into the canal from Liverpool, at low water.—*Caldonian*, in Scotland; a great inland navigation, that forms a junction between Loch Linnhe and the Moray Frith.—*Grand Junction*, in England; a work that joins several other canals in the centre of the country, which thence form a communication between the Thames, Severn, Mersey, and Trent, and, consequently, an inland navigation to the four principal sea-ports, London, Bristol, Liverpool, and Hull. This canal is upwards of 90 miles in length; it commences at Braunston, on the west borders of Northamptonshire, and enters the Thames at Brentford, Middlesex.—*Grand Trunk*, in England. This canal forms a communication between the Mersey and Trent, and, of course, between the Irish Sea and the German Ocean. Its length is 92 miles, from the Duke of Bridgewater Canal, at Preston-on-the-Hill, in Cheshire, to Wildon, in Derbyshire, where it communicates with

the Trent.—*Great*, in Scotland; a work that forms a junction with the Forth and Clyde. Its length is 53 miles, from the influx of the Carron, at Grangemouth, to the junction with the Clyde, six miles above Dumbarton. In the course of this navigation, the vessels are raised to the height of 111 feet above the level of the sea, and, passing afterwards upon the summit of the country, for 18 miles, they then descend into the river Clyde, and thence have free access to the Atlantic Ocean. This canal is carried over 36 rivers and rivulets, and two great roads, by 38 aqueducts of hewn stone.—*Royal*, or *Canal of Languedoc*, in France; a work that effects an inland communication between the Mediterranean and Atlantic. This canal has 37 aqueducts; and its length from Toulouse to Cette is 160 miles.—*Grand or Imperial*, in China; a stupendous work, which extends from north to south upwards of 400 miles, from the river En-ho, in Chang-tong, to Hauch-tchou, in Tehe-kiang. There is not a lock, nor, except the flood-gates, a single interruption to the whole navigation of this immense canal. [N.B. It will be observed that none but the canals of first-rate magnitude and importance have been here noticed. The concise plan upon which this Gazetteer is edited would not admit of more than the bare mention of the names of the numerous smaller canals, and such would necessarily be imperfect, and therefore useless.]

The whole country consists of three successive plateaus, increasing in elevation according to their distance from the sea, and separated from each other by as many chains of mountains. The most magnificent plants that adorn our green-houses and gardens are brought from this part of the world, and among the animals are prodigious numbers of Cape buffaloes, antelopes, and sheep, with vultures, eagles, ostriches, &c. But the possession of this colony is most important from its being, as it were, the key to the Indian Ocean, and a depot whence our ships and troops may be readily despatched to many parts of the world.

Cape Town, the capital of the territory of the Cape of Good Hope. It stands on the west side of Table Bay, and rises in the midst of a desert, surrounded by black and dreary mountains. The storehouses built by the Dutch East-India Company are next the water, and the private buildings lie beyond

them. The mountains beyond the town are, the Table Mountain (3315 feet high), the Sugar-Loaf, the Lion's Head, Charles Mount, and James Mount, or the Lion's Rump. From these mountains descend several rivulets, which flow into the different bays, as Table Bay, Falshe Bay, &c. This town, with its extensive colony, surrendered to the British in 1795, and was restored in 1802 by the treaty of Amiens; it again surrendered to the British in 1806, and was finally ceded to them in 1814. It is divided into the three independencies of Coquimbo, St. Jago, and Concepcion. Chili, though bordering on the torrid zone, never feels the extremity of heat, being screened on the east by the Andes, and refreshed from the west by cooling sea-breezes. The fertility of the soil corresponds with the benignity of the climate, and is wonderfully accommodated to European productions. Nature, too, has enriched the country with valuable mines of gold, silver, copper, iron, tin, and lead; also, with salt springs and mineral waters; and coals are found near Concepcion. The chief rivers are the Maule, Biobio, Cauten, Tolten, Valdivia, Chaivin, Riobueno, and Sinfondo, which rise in the Andes, and flow west into the Pacific Ocean.

China (Empire of), a vast country of Asia, bounded on the E. and SE. by the sea, on the W. and SW. by Independent Tartary, and on the N. by Asiatic Russia, embracing altogether about a third part of the whole continent, and containing the largest amount of population and of wealth united under one government in the world. *CHINA PROPER*, however, does not exceed a fourth part of the whole empire; but even that is immense, for its coast is upwards of 2500 miles in length, and its land frontier 4400 miles.

The stupendous wall of China exceeds every thing of human art and industry that is read of in history, and is said to have been built about the year 1160, to prevent the frequent incursions of the Moguls. It extends along a lilly surface 1500 miles in length; the breadth, in many parts, is upwards of 15 feet at the top; and it is flanked with towers at the distance of every 300 feet; the materials of which the whole is composed are so close and solid, that it is yet almost entire. China is divided into 15 provinces; these provinces contain 4402 walled cities, which are again divided into two classes; the civil class containing 2045, and the military, 2357. The climate and soil of China are various, as the different provinces are nearer to or remote from the south. Here are several large lakes and rivers, and a number of fine canals, one of which, called the Grand Canal, surpasses any thing of the kind in the world. The manufactures embrace almost every article of industry; but the most noted are porcelain, silk, cotton, and paper; and the chief export is tea. The numerous mountains contain mines of iron, lead, tin, tutenag, copper, quicksilver, gold, and silver; quarries of marble, coal, lapis lazuli, jasper, rock crystals, granite, and a kind of sonorous stones, of which musical instruments are composed, are abundant; and here is potter's earth of such various and superior kinds, that the fine porcelain of China is unrivalled. Besides the fruits peculiar to the country, it produces the greater part of those of Europe. The Chinese cultivate even the bottom of their waters; the beds of their lakes, ponds, and rivulets, producing crops unknown to us. In the mountains and forests are wild animals of every species; and there is a great variety of most beautiful birds. The complexion of the Chinese is a sort of tawny; and they pluck up the hairs from the lower part of the face by the roots, leaving a few straggling ones by way of beard. Corpulency is deemed a beauty in men, but a blemish in women, who affect a deal of modesty, and are remarkable for their little feet. Learning is much cultivated in this country: their writing is very particular; for every letter is a word, and, consequently, they have as many symbols or characters as words in their language. Their religion is paganism; they have no sabbath, nor even such a division of time as a week. The principal pagodas are dedicated to Foh, but they are not much frequented, for the generality are engaged with their household gods, every house having its altar and its deities. The population of China has been variously stated, and is by no means correctly ascertained at the present time. That it is immense there can be no kind of doubt, and we have ample evidence of the soil and climate being capable of affording subsistence to prodigious multitudes. Lord Macartney, in 1792, had the number of 333,000,000 stated to him on official authority, which he considered respectable. An enumeration communicated by Dr. Morrison, as made by the present emperor, amounted to about 146,000,000; but a statement has more recently been made (1813), also professed to be official, raising the number to 362,447,183. But on consulting all the authorities within

our reach, and comparing the different accounts, we are inclined to believe that 260,000,000 may be with much more safety relied on, as an approximation to the real number. The great characteristic of the Chinese is "to adhere to all that is established, and to reject all that is new. They are the very transcript of the ancient world living in the present day; they wear the same costume, are subject to the same laws, which are administered precisely in the same way, and they exist to all intents and purposes in the same social and intellectual condition as their forefathers did 2000 years ago."

The habitation of a Circassian is composed of two huts; one allotted to the husband, and to the reception of strangers, the other to the wife and family. Their food is simple, consisting of a little meat, some paste made of gum or millet, and a kind of beer, composed of the same grain fermented. These people have no letters of their own; those among them who write their language make use of Arabian characters. The men are tall and well-proportioned; and the beauty of the women has been long and deservedly celebrated.

A great portion of this large territory is extremely hot, but owing to the vast inequality in the height of the immense mountain ranges which intersect it, and the plains, there is every variety of temperature. Nature is here most prodigal of her gifts both in vegetable and animal productions. "It might be said," observes Humboldt, "that the earth, overloaded with plants, does not allow them space enough to unfold themselves;" and there is scarcely a beast of prey found in tropical climates, or a bird of beautiful plumage, that is not to be met with in abundance. Cocoa, coffee, cotton, indigo, sugar, tobacco, hides, cattle, and Brazil wood, are the principal articles of culture and commerce. The religion is the Roman Catholic.

Constantinople, one of the largest cities in Europe, and the metropolis of the Turkish empire. It is seated between the Black Sea and the Archipelago, on a neck of land that advances towards Nattolia, from which it is separated by a strait a mile in breadth. It was anciently called Byzantium; but the name was changed by Constantine the Great, who made it the seat of the Roman Empire in the East. The number of houses in this city is prodigious; but, in general, they are mean, and all of them constructed of wood, and the roofs covered with hollow tiles. The public edifices alone are built of masonry, in a very solid manner. The inhabitants are half Turks, two-thirds of the other half Greeks and Armenians, and the rest Jews and Franks. There are a great number of ancient monuments still remaining, particularly the superb temple of Saint Sophia, built in the sixth century, which is converted into a mosque, and will contain 100,000 persons conveniently. This condition humanity induced her to accept; and, having ordered all the inhabitants, on pain of death, to close their doors and windows, she rode quite naked through the town. One person, yielding to curiosity, stole a glance at the countess, and was struck dead; and has been famed ever since under the name of Peeping Tom, and his effigy is shown to this day. On the summit of that east from the town is an ancient castle, in which there are barracks for 3000 men; and the other on the west is the cliff so inimitably described by Shakspeare; the town is also defended by several batteries. It was once walled round, and had ten gates; but there now remain only three. The harbour is made by a gap in the cliffs, which are of great height; and hence, in fine weather, is a prospect of the coast of France, from which it is distant only 21 m. The lord warden of the cinque ports (at present—1844—the Duke of Wellington) is now always constable of the castle. Dublin, a county of Ireland, in the province of Leinster, 27 miles long and 17 broad; divided into 106 parishes, and having one city and four market-towns. The country is in general flat, except towards the south, where it is hilly and rocky. The

principal river is the Liffey.—The city of *Dublin*, the metropolis of Ireland, is the capital of this county. Its form is that of a long square, extending nearly three miles, and two in breadth; and it is seated at the head of a spacious and picturesque bay, seven miles from the Irish Sea. It has two cathedrals, 20 parish churches, 10 episcopal chapels, 27 Roman-Catholic chapels, numerous meeting-houses for sects of various denominations, four foreign churches, and a synagogue. Among the principal public buildings are the Castle (the residence of the viceroy), the National Bank (formerly the Parliament House), Trinity College, the Law Courts, the Royal Exchange, the Custom House, the Royal Hospital of Kilmalham for Invalids, the Linen Hall, the Theatre Royal, and the Royal Barracks; also, Carlisle, Essex, and Sarah bridges, three of the seven over the Liffey. The Phoenix Park, at the west end of the city, is a royal enclosure, seven miles in circuit; it includes the villa of the viceroy, the seat of the principal secretary, and a few others; also the Hibernian schools, a salute battery, and the ammunition magazine. Besides the silk, woollen, and cotton manufactures, carried on in the suburbs, there are other branches of useful traffic in different parts of the metropolis; and its foreign trade is considerable. The harbour is incommode by two banks of sand, which prevent vessels of large burden from going over the bar; it has a mole nearly four miles in length, with a lighthouse at the extremity, and another on the promontory opposite, called the Hill of Howth; on the north-west side of which is an extensive pier, enclosing a spacious harbour. Three miles below the city is a fortress, called the Pigeon House; and here also is a commodious dock. The Liffey divides the city almost into two equal parts, and has extensive and noble quays on both sides. Two canals pass from the Liffey, named the Royal and the Grand: the latter extends upwards of 40 miles to the Barrow navigation, and a branch is carried in a west direction to the Shannon, below Banagher; the former communicates with that great river, above Lanesborough, and, by a lateral cut, unites with the Boyne navigation. The environs of Dublin in every direction are very beautiful, and the external appearance of the city itself is equally striking. A love of convivial enjoyments pervades all ranks; those who can afford to be idle seem to give up their whole time to pleasure-taking; and though the appearance of the lower classes exhibits every indication of wretchedness and poverty, they are equally fond of amusement as their superiors. Many are the advantages which Dublin enjoys, but the want of industry, or something peculiar to the Irish character, has hitherto prevented the populace from fairly participating in them. Durham, a county of England, 47 miles in length and 37 broad, containing 679,040 acres, divided into six wards and 74 parishes, and having one city and nine market-towns. Two of the above six divisions, called North-shire and Islandshire, are a detached part, lying north of Northumberland, and including Holy Island. The town of Berwick and its district, on the north side of the Tweed, is also in the jurisdiction of this county. The soil is various: the west part being mountainous and barren, while the east and south consist of beautiful meadows, woods, and corn-fields. Here are rich mines of coal, lead, and iron, and quarries of marble, slate, millstone, firestone, grindstone, limestone, and freestone. The principal rivers are the Wear, Tees, Tyne, and Derwent. Total pop. 324,284.—*Durham*, the capital of the above county, is a city compactly built on a hill, on a bend of the Wear, over which are three stone bridges. The magnificent cathedral and the castle stand on the highest part of the hill; in the former are deposited the remains of St. Cuthbert and the venerable Bede. In a deep vale near the river are the ruins of Finchall Abbey; and on the west of the city is Nevil Cross, erected in memory of the victory obtained by Queen Philippa, in 1346, over David Bruce, king of Scotland, who was taken prisoner. For a lengthened period Durham was one of the duller and least improving of cathedral cities; but during late years there has been a considerable increase of the population, owing chiefly to the opening of several new and extensive collieries, and the construction of railways in the district. In the year 1831, a university, endowed by the dean and chapter, the bishop, and other wealthy individuals, was founded here, and in 1837 it was incorporated by royal charter. In the greater portion of the Papal States vegetation is scarcely interrupted at any period of the year. The air in the mountain districts is pure and salubrious; but the plains of Ferrara and Bologna, the Campagna di Roma, and the Pontine Marshes, are at that season very unhealthy: the latter, especially, are subject to malaria. Little skill is evinced in agriculture; the crops being generally raised only for the supply of the cultivators. The rearing of live stock is the branch of rural industry on which the greatest dependence is placed. As for manufactures, except musical strings, which enjoy a high and deserved celebrity, and the refining of sulphur, there are none worthy of mention. The pope has the title of Holy Father, and Holiness; and is elected from among the cardinals, each of whom is styled His Eminence. In 1798 this state was taken possession of by the French, who erected it into a republic, called the Roman Republic. They obliged the Pope, Pius VI., to remove into Tuscany, and afterwards into France, where he died, in 1799. In the same year, a conclave was permitted to be held at Venice; and in 1800, Cardinal Chiaramonti was elected to the papal chair, who took the title of Pius VII., and resumed the authority of the Ecclesiastical States. This power was held until 1809; when he was deprived by Buonaparte of his temporal sovereignty, and reduced to the condition of Bishop of Rome; but, in 1814, the Pope was restored to his former dignity, and to his territories.

Within four years afterwards, another was built, which also was burned down in 1770; and another, of stone, was completed in 1774, which has hitherto withstood the fury of the elements. The building, to the

height of 33 feet from the foundation, is a solid mass of stones, engrafted into each other; above this are four rooms, one over the other, and at the top a gallery and lantern. It is nearly 80 feet high.

Edinburgh, the metropolis of Scotland, in the county of its name. Its situation is eminently striking and romantic, being built on three hills that run from E. to W., in a direction nearly parallel, and about eight miles in circuit. On the middle ridge, which is narrow and steep, stands the Old Town; the North Town is seated on an elevated plain, gently sloping on every side; and the South Town stands on a similar sloping eminence. The form of the Old Town resembles that of a turtle; the castle being the head, the High Street the ridge of the back, the narrow lanes (called closes) the shelving sides, and Holyrood House the tail. The ancient castle stands on a craggy rock, 200 feet high, with a drawbridge on the only side that is accessible. Here is shown the apartment in which was born James VI. of Scotland, afterwards James I. of England. The palace of Holyrood House forms a grand quadrangle, with a court in the centre, surrounded by piazzas. In the north-west tower is shown the room where Queen Mary sat at supper when Rizzio was dragged from her side and murdered by Ruthven. Adjoining are the splendid ruins of an abbey, founded by David I., and converted by Charles II. into a royal chapel. The communication between the north and south parts of the city is by two noble bridges. The North Town has many new squares and streets, adorned with uniform and elegant houses; the buildings of the South Town are likewise neat and extensive; and the new College forms a very striking object. The university, founded by James VI. in 1581, is celebrated throughout the world; and its medical school, in particular, is entitled to the first rank. This city has also several valuable public libraries, literary and scientific institutions, public hospitals, dispensaries, charitable institutions, &c. On the east side of the city is Salisbury Craigs; a rock that presents a steep front, in the form of an amphitheatre, 550 feet high; being part of a higher hill, called Arthur's Seat. Two miles to the south are the remains of Craignillar Castle, the residence of James V. during his minority, and of Queen Mary after her return from France, in 1562. The Calton Hill is the site of some interesting monuments, of which that of Nelson is the most prominent: here also is the national monument, in commemoration of the victories obtained over the French in the late war; and there are several others in different parts of the town. Of the advantages of Edinburgh over most other large towns as a place of residence, or of its literary and political character, we have no

room here to speak; and as for manufactures, it has but few. Pop. 138,182.

Egypt, a country of Africa, 500 miles in length, and 250 where broadest. This country, so famous in history for its fertility, has not the extent of cultivation it had in ancient times; for many lakes and canals, with the lands they watered, are now become deserts, the sands of which annually accumulate. Though the air is naturally hot, and not very wholesome, it enjoys so many other advantages, that it has always been extremely populous. The inhabitants are composed of three different races of people: the Turks, lately the despotic masters of the country; the Arabs, who were conquered by the Turks; and the Copts, who are descended from the first Egyptians that became Christians. The complexion of the Egyptians is of a dusky brown; the richer sort spend nearly all their time in drinking coffee, smoking tobacco, and sleeping; and they are ignorant, proud, haughty, and ridiculously vain. The Copts are an ingenious people, and skillful in business.—From March to November, the heat, to an European, is almost insupportable; but the other months are more temperate. The south winds, which occur at intervals from February till the end of May, are called by the natives poisonous winds, or the hot winds of the deserts: they are of such extreme heat and aridity, that no animated body exposed to it can withstand its fatal influence. The sands are so subtle, that they penetrate even into closets, chests, and cabinets. It rains very seldom in Egypt; but that want is fully supplied by night dews, and the annual inundation of the Nile. When the water of the river retires, all the ground is covered with mud; then the corn is harrowed into it, and in the following March there is usually a plentiful harvest. But some lands are never fallow, and yield three harvests annually; particularly in Lower Egypt, where sowing and reaping are going on incessantly, wherever the water of the river can be obtained. There is no place in the world better furnished with corn, flesh, fish, sugar, fruit, and all sorts of garden-stuff; and oranges, lemons, figs, dates, almonds, cassia, and plantains are produced in great plenty. The animals of Egypt are tigers, hyenas, antelopes, apes, beeves,

horses, asses, crocodiles, &c.; eagles, hawks, pelicans, and water-fowls of all kinds. This country carried on a considerable trade in East-India commodities, until the Portuguese found the way round the Cape of Good Hope. The merchants of Europe, however, visit the harbours in the Mediterranean, and import and export several sorts of merchandise. The pyramids of Egypt, formerly accounted one of the seven wonders of the world, are all built on rocky and sandy plains: the largest, which is near Gizeh, is 461 feet in perpendicular height, with a platform on the top 32 feet square, and the length of the base is 746 feet; it occupies 11 acres of ground, and is constructed of such stupendous blocks of stone, that a more marvellous result of human labour has not been found on the earth. Here are also caverns, containing mummies, or embalmed dead bodies, which are found in coffins ranged in niches of the walls, and have continued there at least 4000 years. Egypt, though so recently a mere province of Turkey, is now an independent state belonging to the Pacha; and too much praise can scarcely be bestowed upon Mehemet Ali for the beneficial use he has made of that power which, partly by his bravery, and partly by his talent for intrigue, he has obtained. Through his means the manners as well as the arts and sciences of Europe are fast gaining ground in Egypt over the ruder customs of Asia; and an infidel, or unbeliever in the doctrines of Mohammed, is no longer looked upon with contempt or aversion.

A colossal stone elephant, now much decayed, appears on the landing-place, near the foot of a hill. From this an easy slope leads to a cave, excavated out of a rock, 80 feet long and 40 broad, the roof supported by rows of pillars 18 feet high. The sides are formed into compartments, which contain a great variety of carved figures relative to the Hindoo mythology; but the end of the cave is the most remarkable: it includes, with many subordinate figures, a gigantic Trimurti, or three-formed god: Brahma, the creator, in front; Vishnu, the preserver, on one side; and Siva, the destroyer, on the other. England, the southern part of the island of Great Britain. Its ancient name was *Albion*, which, in process of time, gave way to that of *Britain*, by which it was known to *Julius Caesar*, and continued till the year 829, when it received the name of *England*, and *Egbert* was crowned the first king. It is of a triangular form; and, from the South Foreland, in *Kent*, which may be termed the east point of the triangle, to *Berwick-upon-Tweed*, which is the north, its length is 345 miles; from that point to the *Laud's End*, in *Cornwall*, which is the west, it is 425; and the breadth thence to the *South Foreland* is 340. It contains 50,387 square miles, or 32,247,680 acres, exclusive of *Wales*; and it affords all that beautiful variety which can be found in the most extensive tracts of the globe. In some parts plains clothed in the richest verdure, watered by copious streams, and pasturing innumerable cattle, extend as far as the eye can reach; in others are seen gently rising hills and bending vales, fertile in corn, waving with woods, or interspersed with flowery landscapes; while other tracts furnish prospects of a more romantic and impressive kind. Towards the north it is hilly and somewhat rugged; the east coast is, in many parts, sandy and marshy; and a range of rude and elevated land, sometimes rising into lofty mountains, extends from the borders of *Scotland* to the very heart of *England*, forming a natural division between the east and west sides of the kingdom. The lakes are neither numerous nor extensive, and are chiefly in the north-west counties; but there are a number of rivers, the most considerable of which are, the *Thames*, *Severn*, *Humber*, *Mersey*, *Medway*, *Trent*, *Ouse*, *Tyne*, *Tees*, *Eden*, *Avon*, and *Dec*. Among the peculiarly distinguishing features of *England* must be reckoned the number and magnificence of the seats of the nobility and gentry; some venerable with ancient grandeur, others displaying all the taste of modern art combined with every capability for luxurious enjoyment; nor is the sylvan scenery deficient in the substantial requisites for the advancement of agricultural opulence, or the maintenance of rural hospitality. An admirable system of tillage, well furnished farm-houses, and comfortable cottages every where meet the eye, and evince that taste for neatness and rural beauty which is so characteristic of their several

occupants. The size, wealth, and splendour of many of the cities, the extensive manufactures, and the indomitable industry of every class of artisans and traders, must also excite the admiration of all who compare *England* with the rest of *Europe*. With respect to climate, *England* is situate in the north part of the temperate zone; so that it enjoys but a moderate share of the genial influence of the sun. Its atmosphere is inclined to chilliness and moisture, subject to frequent and sudden changes; and is more favourable to the growth than to the ripening of the products of the earth: but the humidity and mildness of the climate maintain the fields in a constant state of verdure; being seldom covered with snow in winter, or blighted by long-continued frosts, and as rarely withered and parched by the droughts of summer. It is true that the most valuable productions, both animal and vegetable, have been imported from foreign countries. The horse has been trained up for all the various purposes of strength and swiftness; the horned cattle have been brought to the largest size and justness of shape; the different races of sheep are variously distinguished, either for uncommon size, goodness of flesh, or plenty and fineness of wool; the deer of its parks are superior in beauty of skin and delicacy of flesh, to those of most countries; and even the several kinds of dogs have been trained to degrees of courage, strength, and sagacity, rarely to be met with elsewhere. The improvement in the vegetable products of this island is not less striking than in the animal: nuts, acorns, crabs, and a few wild berries, were almost all the variety of vegetable food which its woods could boast. To its unbounded commerce with other countries, and to the efforts of culture, *England* is indebted for corn, esculent roots, and plants, and all its garden fruits. The rivers and seas of *England* are stocked with a great variety of fish, which yield a plentiful article of provision to all ranks of people. The manufactures and commerce of this country are vast, various, and extensive; in the woollen, linen, cotton, and hardware branches, in particular, it has long maintained a pre-eminence; and, though nature has denied it the rich fruits of other countries, yet the manufacture, if it may be so termed, of home-made wines, in imitation of all the varieties of the foreign, has been brought to a very great degree of perfection. The civil division of the country is into six circuits, and 40 counties, and the counties are subdivided into wapentakes, or hundreds, and parishes. In each of the circuits, for the most part, two of the judges administer justice twice a year. Two counties, *Middlesex* and *Chester*, are not included in any circuit. The ecclesiastical division of *England* is into two archbishoprics, called the provinces of *Canterbury* and *York*; and every prelate of the different sees, that of *Sodor* and *Man* excepted, has a seat in the *House of Lords*. It is entirely within the temperate zone, except a small part of Norway and Russia; so that there is neither the excessive heat, nor the insupportable cold, of the other parts of the continent; and it is also much better cultivated than either Asia or Africa. The inhabitants are all whites, and, for the most part, much better made than the Africans, or even the Asiatics. With respect to their skill and improvements in arts, sciences, trade, navigation, and war, there can be no comparison between them and the rest of the world; but the advanced civilization and superior influence of Europe is doubtless owing in no small degree to the superior capacity of her inhabitants, their ardour for enterprise, their invention, perseverance, and emulation. The chief rivers and lakes will be found under the heads of the different countries; and the principal mountains are the Alps, Appennines, and Pyrenees. Fezzan, a klogdom in the interior of Africa, having Tripoli on the north, and Cassina on the south. It is an extensive plain, encompassed by mountains, and the surface, in general, is a light sand. Yet there are abundance of wells, from which the husbandman waters the productions of his lands; among these are the date, olive, lime, apricot, pomegranate, fig, maize, barley, wheat, pompions, cucumbers, onions, and garlic; but dates are the staple product, and form the principal food of the population and all domestic animals. A multitude of noxious animals infest the country; adders, snakes, scorpions, and toads swarm in the fields, gardens, and houses; the air is crowded with mosquitos; and persons of every rank are overrun with vermin. The chief occupation of the people is commerce and the conveyance of goods, the situation of Fezzan being highly favourable for it. "The arrival of the great caravans forms a sort of jubilee in the cities of Fezzan; and on reaching Mourzouk, they find the sovereign seated in a chair of state, outside the city, to receive them." The heat of the climate in summer is intense; and in winter a penetrating north wind prevails, which drives to the fire even the natives of a northern country. Tempests of wind are frequent, which whirl up the sand and dust, so as to give a yellow tinge to the atmosphere. The natives are of a deep swarthy complexion; they are tall and well-shaped, but weakly, indolent, and inactive. The true Finns have little intercourse with the inhabitants of the maritime district, except in the annual journey to Abo fair; they inhabit the eastern provinces of Tavastland and Savolax, where they live in the midst of forests, by the borders of the lakes, and lead a mode of life exactly resembling that of the agricultural or settled Laplander, in houses that have a hole at the top to let out the smoke, and in one large room, which is occupied by the whole family. But the great boast of Florence is its grand gallery, consisting of two parallel corridors, each 448 feet in length, and in which are preserved the choicest and most valuable specimens of art; at the head of which is placed the matchless statue of the Venus de Medici, discovered in the 16th century, in the Villa Hadriana, near Tivoli. France, one of the richest, most important, and powerful kingdoms of Europe; having NW. and N. the English Channel, the Straits of Dover, and the North Sea; NE. Belgium, and the Rhenish provinces of Prussia and Bavaria; E. the territories of Baden, Switzerland, and the Sardinian States; S. the Mediterranean and Spain; and W. the Bay of Biscay and the Atlantic. From the Pyrenees in the S., to Dunkirk in the N., its extent is 625 miles, and something more

from the most easterly part of Alsace to the most western point of Bretagne; which province, it must be observed, extends above 100 miles further into the ocean than any other part of the country. The climate is temperate, and the soil productive of all the necessaries of life, and, among its luxuries, of the most excellent wines. The principal rivers are the Seine, Loire, Rhone, and Gironde; and there are many others, which give name to the departments in the new division of this country. The most considerable mountains are the Alps, Pyrenees, Cevennes, and Vosges. France was an absolute monarchy, governed by kings, from the time of Clovis, in 466, to the death of Louis XVI., in 1793. It was divided into 55 military governments or provinces, which varied much from each other in point of extent and importance; and there were others of still inferior consideration. The established religion was the Roman Catholic; and the ecclesiastical division of the country was into 18 archbishoprics and 113 episcopal sees, exclusive of Avignon, Carpentras, Cavaillon, and Vaison, which belonged to the pope. But the revolution of 1793 created a wonderful change, not only in the internal arrangements of this country, but in almost every quarter of Europe. The present political division of France is into 84 departments, nearly equal in extent, instead of the 55 ancient provinces; and the ecclesiastical division into 10 archbishoprics and 50 bishoprics. The Roman Catholic still remains the established religion, but other sects are tolerated; and the new calendar (which had been made during the revolution) ceased at the close of the year 1805. Paris is the metropolis of this country. Mr. Inglis, who travelled through many countries of Europe on foot, thus speaks of French scenery:—"All panegyric upon the loveliness and laughing fertility of France is rhodomontade. There is more of the beautiful and the picturesque in many a single county of England, or even of Scotland, than in all the scattered beauties of France, were they concentrated within a ring fence; excepting always the Pyrenees, which I cannot help looking upon as a kind of separate territory—the mere boundary between France and Spain." There are other travellers, however, who describe many of the districts in France as picturesque and delightful, where the scenery will bear a comparison with that of any other in Europe. The truth, perhaps, lies between them. Since the general peace after the fall of Napoleon, the population of France has gone on steadily increasing; and at the present time (1844) it is estimated at upwards of 35,000,000. As respects the extent and value of her products, France ranks as a manufacturing country next to Great Britain; its silks are unrivalled, and its woollen manufacture is also of great value; it is not so, however, with the generality of manufactured products when compared with those of England, though in some light articles, in the brightness and durability of their dyes, and in the quality of their gloves, shoes, and other leathern goods, they bear away the palm. Mr. McCulloch observes that "the present civil and criminal law of France has been embodied in codes drawn

up, under the auspices of Napoleon, with singular perspicuity and brevity, and is honestly and impartially administered."

Georgia, a country of Asia, called by the Persians, Gurgistan, and by the Turks, Gurtshil. The last reigning king ceded this country to Russia on his death, which happened in 1800; and, in 1802, it was made a Russian government. The hills of Georgia are covered with forests of oak, ash, beech, chestnut, walnut, and elm, encircled with vines, growing perfectly wild, but producing vast quantities of grapes. Cotton grows spontaneously, as well as the finest European fruit-trees; and rice, wheat, millet, hemp, and flax are raised on the plains, almost without culture. The valleys afford the finest pasturage, the mountains abound in minerals, and the climate is healthy. The rivers of Georgia, being fed by mountain torrents, are always either too rapid or too shallow for the purposes of navigation. The Georgians appear to have received their name from their attachment to St. George, the tutelar saint of these countries. The women are celebrated for their beauty; but their air and manners are extremely voluptuous. The men have great skill in the use of the bow, and are deemed excellent soldiers; but are addicted to drunkenness. The superiority in the physical form of the Georgians, and other contiguous Caucasian tribes, and the low state of civilization that has always prevailed amongst them, explains the appallingly unaccountable fact, that these countries have been, from the remotest antiquity down to our own times, the seat of an extensive slave-trade. Latterly the harems of the rich Mussulmans of Turkey, Persia, &c. have been wholly or principally supplied

by female slaves brought from Georgia, Circassia, and the adjoining provinces; and they also furnished male slaves to supply the Manielic corps of Egypt and various other bodies with recruits. The Russians have put an end to this traffic; and they have also deprived the nobles of the power capitally to punish their vassals, and set limits to their demands upon them for labour and other services. The other inhabitants of Georgia are Tartars, Osses, Armenians, and Jews. Gold, iron, and copper are found in considerable quantities; good millstone also is met with; but cotton is the great staple. Georgia was the last settled of the present U. S. founded by the British, and it has rapidly gained in importance and wealth upon the earlier established states of the Union.

Georgia, or *South Georgia*, an island in the Pacific Ocean; visited by Cook in 1775. Here are perpendicular ice-cliffs, of considerable height, like those in Spitzbergen; the valleys were covered with snow; and the only vegetation observed was bladed grass, wild burnet, and a plant like moss, which sprang from the rocks. Not a stream of fresh water was to be seen on the whole coast. Lon. 36.11 W., lat. 54.32 S.

Germany, a country of Europe, the extent of which has varied in every century from the time it was first known to the Romans, and the name is still often vague and indefinite in its application. It is bounded on the W. by France, Belgium, Holland, and the German Ocean; S. by the Tyrol and Switzerland; E. by Prussian Poland, Galicia, and Hungary; and N. by Denmark and the Baltic. For a long period it has contained a great many independent sovereign princes, and a number of imperial towns or small republics, the whole of them forming a great confederacy, governed by political laws; at the head of which was an emperor, whose power in the collective body, or diet, was not directive, but executive. The memorable contest with revolutionary France, which commenced in 1791, ended in the overturn of the old Germanic constitution. The treaty of Pres-burg, in 1805, gave Napoleon an opportunity of effecting a confederation of German princes, called "the Confederation of the Rhine," which was placed under the protection of the French emperor; and the success which attended his arms against the Prussians in 1807, and the Austrians in 1809, gave him the power of altering the territorial distribution of Germany at pleasure. Under these circumstances Francis II. (of Austria) renounced the style and title of Emperor of Germany; Napoleon created new kingdoms for members of his own family, &c., and incorporated the coasts of the German Ocean with the French empire. All this, however, was overturned when the tide of fortune turned against Napoleon on his retreat from Russia, and Germany was restored to its geographical and political position in Europe, but not as an empire, acknowledging one supreme head. The signing and ratification of the new Germanic league took place June 8. 1815; its object being the maintenance of the security of Germany internally and externally, and the assertion of independence and integrity of the respective Germanic states. The members of the diet are represented by 17 plenipotentiaries, over which Austria enjoys the right of presiding. And the members bind themselves under no pretence to declare war against one another, nor to pursue their mutual differences (when any occur) by force of arms, but every part of this extensive country does not enjoy the same mildness of temperature or fertility of soil; but, in general, the air is wholesome, and it produces abundance of all kinds of grain. The surface is tolerably level, yet it contains some mountains and large forests; the white mulberry-tree is very common; olives grow in several places; also chestnuts, oaks, beeches, firs, and fruit trees. Hemp, flax, hops, anise, cummin, tobacco, madder, woad, saffron, &c. are cultivated; and the wines of this country are in high esteem. Salt-springs are very numerous, as well as medicinal springs and baths, both hot and cold. The chief rivers are the Danube, Rhine, Elbe, Weser, Maine, and Oder. The language of Ger-

many is a dialect of the Teutonic, which succeeded that called the Celtic; and the three principal religions are Roman Catholic, the Lutheran, and the Calvinist; but Christians of all denominations are tolerated, and there are a multitude of Jews in all the great towns.

This small quantity, when pure and unadulterated with sandal oil, sells upon the spot at 100 rupees (10*l.*). Greece, anciently a celebrated country in Europe, long famed for the military exploits, learning, and arts of its inhabitants, and of late years the scene of desperate conflicts with the Turks, in order to regain their independence. This was at length effected through the interference of the allied powers of Europe; by whose means, in 1832, it was erected into an independent kingdom, and Otho, a Bavarian prince, ascended the throne. The eastern part of Italy anciently received from its Greek inhabitants the name of Magna Græcia. By the Turks it was divided into four pachalics; Tripolizza, which includes the Morea; Egripos, or Ne gropon; Joannina, including Thessaly and part of Albania; and Salonica, which comprises the south of Macedon. The surface of the country is extremely mountainous, but the climate is temperate and for the most part healthy. It is full of fine views, and is interesting not less for its natural beauties than its classical associations. The vegetable products are for the most part similar to those of S. Italy. Among the animals are the wolf, jackal, lynx, badger, fox, wild boar, wild goat, &c.; game is plentiful; and the coast fisheries afford employment and subsistence to no inconsiderable number of the population.

Greenland, an extensive region towards the north pole, which, whether continental or insular, is regarded as belonging to North America. This country was discovered in the year 983, by some Norwegians from Ice-

land; and it was named Greenland, from its superior verdure to Iceland. They planted a colony on the eastern coast; and the intercourse between this colony, Iceland, and Denmark, was continued till the beginning of the fifteenth century; when, by the gradual increase of the arctic ice upon the coast, the colony became perfectly inaccessible; while, on the west, a range of mountains, covered with perpetual snow, precluded all access. In more recent times, the western coast was chiefly explored by Davis, and other English navigators. The country is said to be inhabited as far as 76° N. lat.; but the Moravian settlements are chiefly in the SW. part. They have some beeves, and a considerable number of sheep, for whose winter subsistence they cut the grass in summer, and make it into hay. The short summer is very warm, but foggy; and the northern lights diversify the gloom of winter, which is very severe. The exports consist chiefly of whale oil, seal, bear, and rein-deer skins, eider-down, &c. The inhabitants, who are seldom much above 5 ft. in height, display considerable skill in the structure of their fishing-boats and hunting implements. Their houses are from 6 to 8 ft. high, varying in size according to the number of families they are intended to accommodate, and divided by skins into different compartments. Their food is principally the dried flesh of the seal, with a little game and fish; coffee, tobacco, snuff, and brandy are esteemed the greatest luxuries.

It also contains an observatory, built by Charles II. on the summit of a hill, called Flamstead Hill, from the great astronomer of that name, who was here the first astronomer royal; and the English compute the longitude from the meridian of this place. Large herds of cattle, and flocks of sheep, with other domestic animals, are reared; but there is no lack of wild ones, and many of the dense woods are infested by reptiles and insects of a most formidable kind. Here are also elegant parrots, and pigeons that almost equal a turkey in size. The inhabitants of the northern part are called Papouas; they have the features and complexion of the Malays, but are, in general, of horrible appearance and great ferocity. Hanover, a kingdom of NW. Germany, the history of which, from its connection with the House of Brunswick, it may be desirable to notice. The reigning family derives its origin from the union of the Marquis d'Este, in the 11th century, with a wealthy princess of Bavaria, the issue of which received the surname *Guelph*, from his maternal ancestors, and inherited the dukedom of Bavaria. Henry the Lion, born in 1129, and well known in the history of the Crusades, was the first *Guelph* duke of Brunswick. He married a daughter of Henry II., king of England; and from this marriage both the houses of Brunswick and Luneburg are descended. But the claim of the elder branch of the house of Brunswick to the crown of England was derived from the union of Er-

nest Augustus with Sophia, grand-daughter of James I. of England; the issue of which marriage was George Louis, who became king of England in 1714. Until of late years Hanover was an *electorate*, containing the duchies of Zell, Lauenburg, Bremen, Luneburg, and the principalities of Verden and Grubenhagen. In 1803, the French obtained possession of all these states; and, soon afterwards, they were given as a province to Prussia; but, in 1813, His Britannic Majesty's government was re-established. In 1815, the duchy of Lauenburg was ceded to Denmark, and some small territories to Prussia and Oldenburg. The remaining states, with Osnaburg, Hildesheim, East Friesland, Lower Munster, and some petty districts, now constitute the kingdom of Hanover, of which George III. of Britain was the first king, in 1815. On the death of William IV., by virtue of the Salic law, it became a separate government, having a reigning sovereign of its own in the person of Ernest, Duke of Cumberland. The kingdom of Hanover ranks as the fifth state of the German confederation, and its army consists of above 20,000 men. The Hartz, and other elevated tracts, occupy part of the south; but the rest of the kingdom consists of one level plain, diversified by a few sand hills. The Hindoos, or Gentoos, possess many good qualities: they are of a black complexion; their person straight and elegant, and their countenance open and pleasant. They differ materially from all other nations, by being divided into tribes or castes; the four principal of which are the Brahmins, soldiers, labourers, and mechanics; and these are subdivided into a multiplicity of inferior distinctions. All the different tribes are kept distinct from each other by insurmountable barriers; and they are forbidden to intermarry, to eat with each other, or even to drink out of the same vessel with one of another caste. The arts in which the Hindoos have made the greatest progress are, agriculture, weaving, dyeing, and architecture, more especially weaving and dyeing. Hindostan, towards the N., is pretty temperate, but sultry in the S.; and it rains almost constantly for three months in the year. Its products are diamonds, and other precious stones, silks, spices, aromatics, drugs, maize, rice, and sugar; and the chief manufactures are cotton goods, muslins, and calicos. But these and various other particulars will be found under the different names of its provinces, cities, towns, mountains, and rivers, described in this Gazetteer. Speaking of the present state of British India, Mr. McCulloch says, "In 1814 the Indian trade was, in a great measure, thrown open; and in 1834 the last vestige of monopoly, and even the company's commercial character, was finally put an end to—a measure which, with some drawbacks, has been productive of much advantage both to the people of India and of England, though in a greater degree to the latter. * * * Since 1834 may also be dated the abandonment, on the part of many of the most wealthy and enlightened inhabitants of the towns, of the gross superstitions of their forefathers, and the adoption of rational opinions in matters of religion; and it may be remarked as extraordinary, that this species of conversion has been most frequent with the Brahmical order, where we should least expect to find it. Commerce, in fact, the great engine by which civilisation, as well as improved morals, have been produced in Europe, has begun to do its work in Hindostan also."

Holland, formerly the *Dutch Netherlands*, now a kingdom of Europe, extending 150 miles from north to south, and 100 from west to east. It consists of seven provinces: namely, Holland, Guelderland, Zealand, Utrecht, Friesland, Overysel, and Groningen, and what was called the Land of the Generality, or Dutch Brabant; besides a portion of Lamburg and Luxemburg. Among the most valuable natural productions of this country may be reckoned its excellent

cattle; and great quantities of madder are exported, chiefly cultivated in Zealand. The principal revenue arises from the herring, cod, and whale fisheries; but these are not so considerable as formerly. The inland trade is greatly facilitated by canals, which pass in every direction, and equal the roads in other countries. This country contains thousands of windmills for sawing timber, grinding corn, &c.; and the number of its manufactures is astonishing. The chief rivers are the Rhine, Meuse, Dommel, Waal, Yssel, Scheld, and Veelt. The Calvinist religion is the most prevalent, but all other sects are tolerated. The Dutch are strongly attached to their government, and few countries possess a population in which the domestic and social duties are discharged with such constancy. A scrupulous economy and cautious foresight seem to be the characteristic virtues of every class; but though they are frugal, they live well and substantially. In 1795 Holland was rapidly overrun by the French; the Stadtholder fled, and it was named the Batavian republic; this form of government continued till 1806, when Napoleon erected it into a kingdom in favour of his brother Louis; but on his abdication in 1810, it was united to France. In 1813 a counter-revolution took place, and the Prince of Orange was proclaimed sovereign under the title of William I. In 1810 this monarch abdicated his throne in favour of his eldest son, now William II. [See *Belgium*.]

Holland, the most considerable province of the kingdom of Holland, divided into South and North Holland; which last is also called West Friesland, to distinguish it from Friesland on the east side of the Zuider Zee. This province is not above 180 miles in circuit; but is so populous, that no country in Europe, of such a small extent, can equal it. The land is almost every where lower than the sea, and the water is kept out by dikes. The pastures are rich; there is plenty of cattle, butter, and cheese; and the seas and rivers abound with fish. Holland has extensive linen and woollen manufactures, and numerous docks for the building of ships.—A strong town in Oberland, Prussia.

Different parts of the coast have been called by the names of the discoverers, &c.; but a great proportion is yet imperfectly explored, and the interior is scarcely at all known to Europeans.

Most of the West India productions succeed well here, but they are little cultivated. The coast was discovered by Columbus in 1502; it was transferred from Spain to England in 1670, but its occupation was contested by the Spaniards at different times, down to 1798, since which it has remained quietly in our possession. Hottentots, Country of the, a large region in the south of Africa, extending 350 miles south along the Atlantic Ocean to the Cape of Good Hope, and thence east 500 miles along the Indian Ocean to the mouth of the Great Fish River, which parts it from Caffraria. There are numerous tribes of the Hottentots, differing from each other in their manners and customs; but a short account of the three principal will, perhaps, be sufficient to convey an idea of the whole. Those in the vicinity of the Cape are as tall as most Europeans, but are more slender; and the characteristic mark of this nation is, the smallness of their hands and feet compared with the other parts of their body. Their skin is of a yellowish brown hue; they have high cheek-bones; and the finest set of teeth imaginable. The females as well as the males are clothed with sheep-skins; the wool being worn outward in summer and inward in winter; and they besmeer their bodies all over with fat, in which soot is mixed. They are excellent swimmers and divers, and practise bathing several times in the day. Their habitations are merely huts, resembling a round bee-hive, and very low. Another tribe of Hottentots are the Bosjesmans, who inhabit the interior part of the country, and live by hunting and plunder. They are of short stature, and remarkably lean; their eyes are more wild and animated than those of the Hottentots in the vicinity of the Cape; and their whole countenance exhibits strong symptoms of suspicion and apprehension. Their weapons are poisoned arrows, shot from a small bow; and they will hit a wild animal with a tolerable degree of certainty at a distance of 100 paces. To kill it entirely, to cut out the poisoned

part, and to begin devouring the prey, are acts that follow each other with the utmost rapidity. Many of these savages go entirely naked, and chiefly reside in bushes, holes made in the ground, or clefts in rocks. To the north of the country of the Bosjesmans, and on the other side of the Orange River, is another tribe, called Coras, who may be reckoned to rank higher than any of the other Hottentots known in the S. of Africa. They are more cleanly in their appearance, and neater in their dress and domestic utensils. The Coras appear to be a mixed breed, between the Hottentot and Caffre; a tribe of the latter are their nearest neighbours, with whom they live on very good terms; but a perpetual warfare subsists between them and the Bosjesmans. With respect to the Hottentots in general, none of them seem to have any religion, but they have a firm opinion of the power of magic. The country is naturally barren and mountainous; but, in many parts, industry has overcome these difficulties, and it produces not only a sufficiency of all the necessaries of life for the inhabitants, but also for the refreshment of the European ships that touch at the Cape. The wild beasts and quadrupeds are abundant; and there is also a vast quantity of birds, reptiles, and insects.

The palace is situated within a strong inner citadel, surrounded by barracks; the arsenal is capacious and well stored; and the public granaries are of enormous extent, and kept full of corn. Hull, or **Kingston-upon-Hull**, a borough and sea-port in the East R. of Yorkshire. It was built by Edward I., and stands on the west side of the river Hull (over which is a modern stone bridge), near its entrance into the Humber. More ships are sent hence to Greenland than from any other port, that of London excepted, though the whale fishery is by no means so considerable as formerly. Here are two wet docks, with spacious quays, and several dry docks for building and repairing vessels. Among the public buildings are the Trinity House, for the relief of seamen and their widows, an armoury, a naval storehouse, a custom-house, and an exchange. The trade and commerce of Hull are very extensive; and it is deemed the fourth port in the kingdom. The natural facilities for internal communication which it possesses have, indeed, been greatly extended by artificial means: by

ivers and canals it is united with Sheffield, Leeds, Manchester, Liverpool, &c.; so that it has become not merely the principal port for the W. R. of Yorkshire, but also for a considerable portion of the trade carried on between Lancashire and the N. of Europe. Lon. 0.18 W., lat. 53.45 N. Pop. 41,629.

The principal one has a basin 51 feet in diameter, and in the centre an orifice 17 feet over, in which the water rises and falls; and from this pipe, in violent eruptions, a column of boiling water is frequently shot up 100 feet perpendicularly, or thrown out diagonally to a great distance. In 1783, the most tremendous volcanic eruption on record, accompanied by violent wind and rain, took place in this island. Three fire-spouts broke out on Mount Skapta, which, after rising to a considerable height in the air, formed a torrent of red-hot lava, that flowed for six weeks, and ran a distance of 60 miles to the sea, in a broken breadth of about 12 miles; by which 12 rivers were dried up, 21 villages totally overwhelmed by fire or water, and 34 very materially injured. The Icelanders are rather tall, of a frank open countenance, a florid complexion, and yellow flaxen hair; the women are shorter in proportion, and more inclined to corpulency. Their predominant characteristics are unsuspecting frankness, pious contentment, and a steady liveliness of temperament, combined with a strength of intellect rarely to be met with in other parts. All the grains, roots, and fruits of temperate regions grow luxuriantly; and in none of the W. states is corn raised with greater facility and in more abundance. Many large and flourishing settlements have been formed in its western part since the introduction of steam navigation on the Mississippi. Grain, cattle, butter, cheese, and other agricultural products form the chief articles of export; and sugar, tea, coffee, wines, and manufactured goods are the chief imports. and smaller Antilles; the former consisting of Cuba, Hayti, Jamaica, and Porto Rico; and the latter, of the Virgin, Leeward, and Windward groups, with the Bahamas, Trinidad, Tobago, and a few other islands. Of these, Cuba and Porto Rico belong to Spain; Hayti is independent; Jamaica, the Bahamas, Trinidad, Barbadoes, Antigua, Dominica, Grenada, St. Lucia, &c. belong to Great Britain; Guadeloupe, Martinique, Marie Galante, &c. to France; St. Eustatius, Saba, and Curacao, to the Dutch; St. Croix, St. Thomas, and St. John, to the Danes; and St. Bartholomew to the Swedes. They were formerly likewise called the Caribbee Islands, from the aborigines of the country; and the sea in which they lie is named the Caribbee Sea. The name of Caribbee should, however, be confined to the smaller islands, lying in a semicircle between Porto Rico and Trinidad. These were inhabited by the Caribs, a fierce race of Indians, nowise remembering their timid neighbours in the larger islands.

The mountains and forests contain immense numbers of red and roe deer; the alpine and common hare, and other game, are also abundant. Ireland, an island of Europe, lying to the west of that of Great Britain. It is 280 m. in length and 160 m. in breadth; containing about 19,436,000 acres, divided into four provinces—Ulster, Leinster, Munster, and Connaught; and these are subdivided into 32 counties. The climate of Ireland is mild and temperate, but more humid than in England. In general, it is a level country, well watered with lakes and rivers; and the soil in most parts is very good and fertile. It produces corn, potatoes, hemp, and flax, in great plenty; and cattle, hogs, beef, and butter are exported in very considerable quantities. Ireland is, in fact, much better adapted for a grazing than for an agricultural country; and such, in this respect, is the excellence of the soil, that in most parts it never fails, when laid down to grass, to clothe itself with a rich and luxuriant cover of herbage. The other commodities are hides, wool, tallow, wood, salt, honey, and wax. There are also quarries of marble and fine slate, and mines of coal, iron, copper, lead, and silver. Every habitable part of the island abounds in the ruins of castles, churches, and religious houses; and many more have entirely disappeared, whose site is now unknown. The principal manufacture is fine linen cloth, which is brought to great perfection; and the trade in it is very considerable. This country is well situate for foreign commerce, on account of its many secure and commodious bays and harbours. The coasts teem with fish. The lakes, more usually called Loughs, are numerous; the most noted are those of Erne, Corrib, Neagh, Killarney, and Allen; and the chief rivers are the Shannon, Foyle, Liffey, Boyne, Sure, Barrow, Blackwater, and Lee. Whether attributable to the soil or climate, or both, it is certain that in Ireland there are no moles, toads, nor serpents. The laws of this island differ but little from those of England, and the established religion is the same; but the majority of the people are Roman Catholics, and retain their nominal bishops and digni-

aries. Formerly this kingdom had a Parliament, which was subordinate to that of Great Britain; but, in 1800, it was deemed expedient that Ireland should be united to England. The two Parliaments passed acts for that purpose; and the two kingdoms, in 1801, were styled the United Kingdom of Great Britain and Ireland; and the Lord Lieutenant and council are appointed by the sovereign.

The climate is very different, according to the various situations of its provinces. Though for the most part mountainous, Italy has some plains of great extent and extraordinary fertility, of which the most extensive and richest is that of Lombardy, including nearly the whole of the Lombardo-Venetian kingdom, the central portion of the Sardinian dominions, great part of the duchies of Parma and Modena, and the north legations of the Papal States. The forests are well stocked with game; and the mountains afford iron, lead, alum, sulphur, marble, alabaster, jasper, porphyry, &c. No country has produced better politicians, historians, poets, musicians, painters, and sculptors, exclusively of those of ancient times. The Italians are generally well-proportioned, and are affable, courteous, ingenious, sober, and ready-witted; but extremely jealous, vindictive, lascivious, ceremonious, and superstitious. The women are majestic in figure, possessed of the most lively sensibility, voluptuous, earnest, and enthusiastic; with black hair, black sparkling eyes, and dark olive complexions. Masquerades, gaming, horse-races without riders, and conversations or assemblies, are the chief diversions of the Italians. Jamaica, the largest and most valuable of the West Indian islands belonging to Great Britain, was discovered by Columbus in 1494. It lies 30 leagues west of Hayti, and is of an oval form, 170 miles long and 60 broad, divided into three counties, Middlesex, Surrey, and Cornwall, and contains upwards of 4,080,000 acres. The mountains are covered with many kinds of trees; and in the valleys are sugar-canes, and such a variety of fruit-trees, as to give the country a most fertile and pleasing aspect. But there are alligators in the rivers, guanoes and galliwaspes in the fens and marshes, and snakes and noxious animals in the mountains. The year is divided into two seasons, the wet and the dry; the months of July, August, and September are called the hurricane months; and there is lightning almost every night. The general produce of this island is sugar, rum, molasses, ginger, cotton, indigo, pimento, cocoa, coffee, several kinds of woods, and medicinal drugs. Maize, guinea corn, and rice are the principal grains cultivated; the plantain, banana, yam, cassava, and sweet potato are indigenous; and few countries offer so fine an assortment of tropical fruits. The European pop. consists of English, Scotch, Irish, French, German, and Portuguese settlers; the coloured races are divided, according to their share of negro blood, into *sambos*, *mulattos*, *quodroons*, and *mestizos*. This country is the richest in the world for gold; there are also extensive silver mines; and fine copper is the main source of the wealth of many provinces. Rice is the principal grain cultivated; ginger, black pepper, sugar, cotton, and indigo are raised in great quantities; and the tea-shrub grows wild in the hedges. The rocks and most barren places produce a variety of fruits, plants, and roots; the woods, forests, and mountains afford good pasturage, and are stocked with deer, oxen, buffaloes, hogs, and horses. Here are also large quantities of fine porcelain, silk, and skins, and red pearls, which are not in less repute than the white. The Japanese are of a yellowish complexion, and their hair is black, thick, and shining, from the use they make of oils. Their food consists almost entirely of fish, fowl, eggs, and vegetables; and the first compliment offered to a stranger is a dish of tea, the next a pipe of tobacco. They treat the women with great severity, and punish adultery with death. Their language is so peculiar, that it is understood by no other nation. The sciences are highly esteemed among them; and they have several schools, in which are taught arithmetic, rhetoric, poetry, history, and astronomy. "For more than three centuries its fortunes have been stationary: crowds of pilgrims fill its streets at one season of the year, creating a temporary activity, and increasing the revenues of the Turkish officers; but at all other times its condition recalls forcibly the complaint of Jeremiah:—'The city sits solitary that was full of people: she is become as a widow; she that was great among the provinces has become tributary. In this manner they wander about, encamping under tents of skin, and supporting themselves with the produce of their deer. The manners of the fixed Koriacs are a mixture of duplicity, mistrust, and avarice. Their regular occupation is hunting and fishing; and they live upon dried fish, and the flesh and fat of the sea-wolf and whale. When a Koriac dies, his relations and neighbours erect a funeral pile, upon which they place a portion of his wealth, and a stock of provisions, consisting of whatever they conceive he will want for his great journey, and to keep him from starving in the other world. The climate here is excessively cold during winter; the ice begins to disappear in May; and, about the middle of June, hot weather commences, which at times is so violent as to scorch the faces of the hunters. Mock suns and halos are frequent; and the night is enlivened by the aurora borealis. The inhabitants consist of two distinct races of Indians—the Esquimaux and the Hunting; the former obtain a precarious subsistence entirely by fishing on the coasts, and the latter by killing animals in the interior. Of all the tribes settled on the shores of America, the Esquimaux are the most filthy, disgusting, and miserable; and they are at once hated and despised by the other Indian tribes. In their language, persons, and manners they bear a near resemblance to the Greenlanders. Their winter houses consist of caves sunk in the earth, but in summer they dwell in tents of a circular form, constructed of poles, and covered with skins. The Labrador fishery now rivals that of Newfoundland, having increased immensely of late years. A continual trade is carried on between the Hunting Indians and the Europeans; the former bringing down the skins and furs to the settlements, and exchanging them for ammunition and clothing.

Taking a merely superficial view of this county, it may be said to be one of those that are least favoured by nature. The hundred of Furness is a wild and rugged region, stored with quantities of iron ore and slate, and covered with a growth of underwood, which is cut in succession, and made into charcoal. The east part, between the Ribble and the Mersey, is mountainous, and generally barren; and the southern part is flat, from the sea to the commencement of the ridge called Blackstonedge, which separates the county from Yorkshire. In the north-east are some lofty hills, the most noted of which is Pendle Hill; the remaining part is varied with hill, dale, and moor.

Lancashire is little adapted for a corn country, but is singularly fitted for the growth of potatoes. Among its products is a species of coal, called cannel, far exceeding all other, not only in making a clear fire, but for its capability of being manufactured into candlesticks, cups, standishes, snuff-boxes, &c. As a commercial and manufacturing county, Lancashire is superior to any other in the kingdom. It is, in short, the grand seat of the cotton manufacture, which has grown up with a rapidity wholly unexampled, and given an importance to many of its towns which they could scarcely have attained from any other cause. But, besides that of cotton, the woollen manufacture is extensively carried on at Rochdale and other places in this county, as is that of silk, flax, paper, hats, &c.; while canals and railways traverse the county in every direction, and bring it into speedy communication with almost every other part of the empire. The principal rivers are the Mersey, Irwell, Ribble, Loyne or Lune, Levern, Wyre, Hodder, Roche, Duddon, Winstar, and Ken; and it has two extensive lakes, called Winander Mere and Coniston Mere. Total pop. 1,667,034.

The church is a fine structure, built on the side of a hill; on the summit of which is a noble castle, serving both as the shire-house and county-gaol. On the top of the castle is a square tower, called John of Gaunt's Chair, whence there is an extensive prospect. Five miles from this place is Dunald Millhoie; a cave at the foot of a mountain, into which a large brook runs, and passes two miles underground before it appears again. Swedish Lapland occupies the southern quarter of this country, and is divided into four lapmarks, or provinces: Russian Lapland forms the eastern part, and is included in the government of Archangel; Norwegian Lapland extends the whole length of the Severnoi, on their northern side, and forms the province of Finmark. The Laplanders are low in stature, stout, and of a yellowish complexion; they are peaceable, obedient to their superiors, cheerful in company, but very mistrustful, and are great cheats in commerce. Their language comprehends so many dialects, that it is with difficulty they understand each other. The men are divided into fishers and mountaineers; and their chief traffic is with the Norwegians, with whom they exchange skins and furs, for flour, cloth, and hardware goods. All the Swedish and Norwegian, as well as the greater part of the Russian, Laplanders, bear the name of Christians; but their religion is a compound of Christian and Pagan ceremonies. Towards the north, the sun remains for many weeks below the horizon in winter, and in summer is as long without setting: during that long period, however, the darkness is relieved by the brightness of the moon and stars, and the vivid concussions of the aurora borealis. The rein-deer serves the Laplanders as their principal beast of burden; its milk is highly valued; its flesh supplies them with food; its sinews are made into thread, and its horns into many kinds of domestic utensils; and its skin furnishes a great part of their dress.

Lincolnshire, a county of England, 77 miles long and 45 broad, containing 1,758,720 acres, divided into 30 hundreds and 630 parishes, having one city and 31 market-towns. The coast is flat, and, at low water, may be seen the submarine relics of a forest, which is a great natural curiosity. The principal rivers are the Uumber, Trent, Witham, Welland, and Ancolm. This county is divided into three districts, called Holland, Kesteven, and Lindsey. The first consists of fens and marshes; some in a state of nature, and others cut by drains and canals. The fens, in their native state, produce vast quantities of reeds, which are annually harvested for thatch; the drained parts form excellent pasture land, and some even yield large crops of corn. Prodigious quantities of geese are bred in this district; and here are many decoys for wild ducks, teals, wigeon, and other fowls of the duck kind. Kesteven includes part of the fens; but the air is more salubrious than the district of Holland, and the soil more fruitful. Lindsey, the largest district and most elevated part, includes all the county that lies north of Lincoln, and the Fosslyke, which Henry I. cut between the Witham and the Trent. To the north-east is a large tract of heathy land, called the Wolds, in which great flocks of sheep are bred. Though a great part of the co. was formerly very unproductive, it is now quite the reverse, improvements of all sorts having been prosecuted in it for many years past with extraordinary spirit and success. Near this is a magnificent aqueduct, 2400 feet in length, which conveys water across a deep valley to a great reservoir at one of the extremities of Lisbon. This city was almost destroyed by an earthquake in 1755; but the ruined part has been handsomely rebuilt. On the top of a rock is an old castle, part of which serves as a fortress; and at the bottom is the cave of Trophonius, the last oracle that was heard to utter the decrees of fate. Before the revolution in Greece Livadia was the seat of a vaivode or governor, and had a considerable trade in the produce of the surrounding country. It was burned by the Turks in 1821, and subsequently destroyed in part by the Greeks in an attack upon the Turkish garrison. There can be little doubt, however, that it has now recovered much of its former prosperity. Lon. 22.59 E., lat. 38.26 N.

Liverpool, a borough and sea-port of England, in Lancashire, being, next to London, the greatest emporium in the British empire. It is seated on the Mersey, and has an excellent harbour, formed with great labour and expense; ships being admitted into noble wet docks, secured by flood-gates. Since the completion of the Duke of Bridgewater's Canal, several other docks have been made, which, in their construction and arrangements, are superior to any other port in the kingdom. The trade of Liverpool is general; but the principal branch is the American and West Indian trade. The African, Baltic, and Portugal commerce is also very great, as well as that of Ireland; many ships are sent to the East Indies, and to the Greenland whale-fishery; and the coasting trade employs a number of vessels. By inland navigation, Liverpool has communication with the rivers Dee, Riddle, Ouse, Trent, Humber, Severn, and Thames. Its facility of intercourse with Manchester, &c. by railway is also of the highest importance. The principal manufactures are fine porcelain, earthenware, watches, and stockings; some glass, iron, soap, salt, sugar, and copperas works; many

roperies, and upward of fifty breweries. Independently of quintupling its population during the last half century, Liverpool has been more improved, during that period, than any other town in England. Besides numerous churches, Catholic chapels, and dissenters' meeting-houses, there are several public buildings worthy of so opulent a town; an elegant town-hall, a splendid exchange, a custom-house, a lyceum, an Athenæum, and other institutions for literary and scientific pursuits; besides three theatres, and several charitable foundations. London, the metropolis of the United Kingdom of Great Britain and Ireland; situated on the Thames, in the county of Middlesex; now one of the largest and most opulent cities in the world, and mentioned by Tacitus as a considerable commercial place in the reign of Nero. It was first walled round with hewn stones and British bricks; by Constantine the Great; and the walls formed an oblong square, about three miles in circuit, with seven principal gates; but these have long since disappeared, except a few scattered fragments of the walls. London, in its most extensive view, consists of the City, properly so called, the City of Westminster, and the Borough of Southwark, with the suburbs in Middlesex and Surrey, within what are called the Bills of Mortality; including an area of seven miles in length, and averaging upwards of two miles in width. But of such immense importance is this vast metropolis in all that relates to the commerce, wealth, and power of the United Kingdom and its dependencies; so greatly has it increased in extent and magnificence; and so truly may it be regarded as the emporium of the arts and liberal sciences,—that in noting down a few of its distinguishing features, in this limited space, we feel it necessary to impress on the mind of a stranger to London, that any slight particularization of its parts can scarcely fail to detract from the grand comprehensiveness of the whole. Among the churches in the metropolis, St. Paul's cathedral and Westminster Abbey are the most conspicuous and most splendid: St. Dunstan in the East; St. Michael, in Cornhill; St. Stephen, in Walbrook; St. Aldermary, in Bow Lane; St. Mary, in Cheapside; St. Bride, in Fleet Street; St. Martin in the Fields; and St. George, Hanover Square, are some of the other churches most distinguished for fine architecture. There are likewise a great number of chapels for the established church, foreign Protestant churches, Roman-Catholic chapels, meeting-houses for dissenters of all persuasions, and three large synagogues for the Jews. The royal palace of St. James, on the north side of a small park of the same name, is an ancient building; it is mean in external appearance, but the apartments are the best calculated for regal parade of any in the kingdom. The royal residence, however, is Buckingham Palace, on the west side of St. James's Park, where Buckingham House originally stood. Among the public buildings, which can merely be enumerated here, are Westminster Hall, containing the supreme courts of justice, and adjoining to which are the new and splendid Houses of Parliament; the Guildhall of the city; the Sessions House; the Tower, an ancient fortress, in which are some public offices, a magazine and arsenal, the regalia of the United Kingdom, &c.; the Trinity House and the New Mint, on Tower

Hill; the Horse Guards, the Treasury, and the Admiralty, at Whitehall; the noble collection of public offices which form that magnificent structure called Somerset House; the British Museum; the New Royal Exchange (completed in 1811); the Post Office; the Bank of England; the Custom House; the Excise Office; the East India House; the South Sea House; the Mansion House, for the Lord Mayor; the Monument, in commemoration of the great fire in 1666; New London Bridge, and the five bridges of Southwark, Blackfriars, Waterloo, Westminster, and Vauxhall. Also, the numerous inns of court for the study of the law; King's College and the London University; the noble scholastic foundations of Westminster, Christ's Hospital, the Charterhouse, St. Paul's, Merchant Tailors', &c.; besides learned societies, scientific institutions, and public seminaries; the halls of the different trading companies; the splendid club-houses and hotels; the various extensive hospitals, and other charitable foundations; the theatres, and other public places of diversion; with its fine squares and streets, too numerous to be here particularly mentioned.—The parishes in the Bills of Mortality amount to 147; of which 97 are within the walls, 17 in the liberties without the walls, 23 out-parishes in Middlesex and Surrey, and 10 in the city and liberties of Westminster.—Such, on a cursory view of it, is the metropolis of Britain, to the extent and opulence of which many causes have contributed. From the openness of the country around, and a gravelly soil, it is kept tolerably dry in all seasons, and affords no lodgment for stagnant air or water. Its cleanliness, as well as its supply of water, are greatly aided by its situation on the banks of the Thames; and the New River, with many good springs within itself, further contributes to the abundance of that necessary element. Nor should the admirable sewerage of London pass unnoticed, which, although out of sight, and hardly appreciable, by others than engineers, constitute a system of drainage altogether unknown in any other modern city. London, with regard to the circumstance of navigation, is so placed on the Thames, and has such extensive wet docks, as to possess every advantage that can be derived from a sea-port, without its dangers. To its port are also confined some branches of foreign commerce; as those to Turkey and Hudson Bay, and nearly the whole of the vast East India trade. Thus, London has risen to its present rank of the first city in Europe, with respect to opulence; and nearly, if not entirely so, as to the number of inhabitants. To describe the trades and manufactures that are carried on in London, would be to enumerate all that in other places in the kingdom are separately noted for, and would include nearly every article of utility or luxury; for such are the facilities which the metropolis affords for the performance of all operations on an extensive scale, and such is the spirit of competition that exists among its industrious and enterprising inhabitants, that whatever speculation in art, manufactures, or commerce holds out a fair promise for the advantageous employment of capital or talent, is sure to be embarked in and pro-

secuted with the most unremitting energy. Truly has it been said, that "during the last 30 years London has made greater advances than could reasonably have been expected in an entire century. Within that period four bridges have been built, extensive docks have been excavated, gas has been introduced into every street and alley; steam, both on the river and on railways, has given it an almost unlimited power of intercourse with every part of the kingdom and of the world; new and handsome markets have been erected, arcades lined with elegant shops have been formed, and wide lines of communication have been opened through close and densely crowded neighbourhoods," &c. &c. The City is divided into 26 wards, each governed by an alderman; and from the aldermen the Lord Mayor is annually chosen. There are likewise 236 common-councilmen, a recorder, a common-sergeant, two sheriffs (who are also sheriffs of Middlesex), a chamberlain, a town-clerk, a remembrancer, a water-bailiff, and many inferior officers. The W. end of the town is beautified and rendered healthy by four extensive parks, all affording ample scope for healthy amusement and exercise to those resident in their vicinity: viz. Hyde Park, lying W. of the roads leading from Piccadilly and Oxford Street, with Kensington Gardens adjoining its W. boundary; St. James's Park, extending from Whitehall to Buckingham Palace, with the Green Park attached, on the S. side of Piccadilly; and the Regent's Park, situated to the N. of Portland Place, beautifully laid out, and surrounded by splendid buildings, with the gardens of the Zoological Society on its N. side. Did our space permit, we should also describe some of the principal squares and monuments. The city is represented in parliament by four members; besides which there are two for the city of Westminster, and two for each of the five metropolitan boroughs; viz. Marylebone, Finsbury, the Tower Hamlets, Southwark, and Lambeth. The population, according to the last census, is as follows: London within the walls, 54,626; London without the walls, 70,382; Westminster, city and liberty, 222,053; and the borough of Southwark, 98,098. Among the out-parishes of most note are Marylebone, 138,164; St. Paneras, 129,763; Islington, 55,690; Kensington and Brompton, 23,834; Chelsea, 40,179; Lambeth, including Kennington, Brixton, &c., 115,888; Camberwell, 39,868; Stepney, 63,723; Hackney, 37,771; the population of the METROPOLIS, according to the extensive signification applied to it in the census returns of 1841, amounting to the enormous sum of 1,873,676. The inhabitants are divided into a number of tribes, and the island into 28 provinces, all of which have their separate chiefs, though they are tributary to the Ovahs, whose chief is, in effect, king of the island. They are in general tall, well made, and of an olive complexion; their hair is black, but not woolly. Both men and women are fond of bracelets, necklaces, and ear-rings. Flowers nursed in the English greenhouses grow wild here in the fields; and the hedges are mostly formed of the myrtle, rose, jasmine, and honey-suckle. "Here," says a modern traveller, "all is sunshine; the green bananas, with their beautiful feathery tops, tell the visitor that he has bid farewell to Europe; the orange-trees hold out their branches, laden with golden fruit. Plantations of coffee-trees fill the spaces between the houses, the splendid coral-tree hangs over his head, and the snowy bells of the tulip-tree mingle with the scarlet hibiscus." Every part of Madeira, not encumbered with rocks, is extremely fertile; the hills are covered with luxuriant vegetation, and the mountain

scenery of the Interior is bold and highly romantic. The British factory settled in this island has considerably more of the trade than the Portuguese.—A large river that forms the NW. boundary of Brazil.

It is of a triangular shape, and extends from 74° to 85° E. long., and from 6° to 20° N. lat., its greatest length being about 950 m. The surface consists of a central table-land, surrounded on all sides by an undulating or plain country gradually diminishing in elevation as it approaches the sea. The W. coast is exposed to all the fury of the monsoon, with heavy rains and thunder-storms. Rice, sugar, pepper, the cocoa-nut, maize, cotton, the various fruits, and other productions of Hindostan, are all here cultivated; and teak, ebony, sandal, and other valuable timber trees grown.

On the south side stands the church, at the back of which is the residence of the governor; and on the north is the exchange, on which is erected a lighthouse. The whole is surrounded by a strong wall, and defended by batteries, bastions, &c. The Black Town, which is also walled and fortified, stands to the north of the fort, and is inhabited by Gentoos, Mohammedans, Armenians, and Jews. Madrid, the capital of Spain, in New Castle; and the largest and finest town in the kingdom. It stands in a sterile plain, surrounded by mountains; and contains numerous churches and convents, besides several magnificent palaces and squares, and nearly 100 towers or steeples in different places, which contribute greatly to the embellishment of the place. The great walks constitute another grand feature of the city. The *Prado*, or public promenade, is as fashionably attended, especially on Sunday, as Hyde Park in London; nor can any better idea of the out-of-door appearance of the population be got than by observing them on the Prado. The ladies generally wear black silk dresses, with mantillas of various colours, their head-dress, consisting merely of a slight veil attached to the hair by a comb, and falling on the shoulder; the dress of the men differs

scarcely at all from that of the French or English, except that they usually cover their persons with large cloaks, which they wear very gracefully. Morals in all classes, especially the higher, are in the most degraded state; the men think little of their marriage obligations; the women make dress and show the business of their lives; court admiration, and are willing victims of unprincipled gallantry. Madrid has royal manufactures of china, cards, saltpetre, &c., but it has little trade, and chiefly prospers by the presence of the court. It is seated on the river Manzanares, which, though small, is adorned with a handsome bridge. Lon. 3.54 W., lat. 40.25 N. Pop. about 170,000.

It is caused by a furious current, which runs among these isles, flowing contrary to the motion of the tide, through a channel that has great and sudden inequalities of depth; and here, when its violence in calm weather is greatest, the vortex is tremendous. When the stream or whirlpool is most boisterous, and its fury heightened by a strong west wind, it roars equal to the loudest cataract. The intervals of tranquillity are at the turn of the ebb and flood, which last only half an hour, its violence gradually returning.

The sea-coast is almost wholly possessed by the Malays, who are rather below the middle stature, their limbs well shaped, but particularly slender at the wrists and ankles. Their complexion is tawny, and their hair long, black, and shining. They are fond of navigation, war, plunder, emigration, adventures, and gallantry, and speak the softest language of Asia; yet they are deemed the most treacherous and ferocious people on the face of the globe. Malta, an island of the Mediterranean, between Africa and Sicily, belonging to Great Britain; containing two cities and 22 villages, and having several good harbours on the coast opposite Sicily. The port of St. Paul is so called from a tradition that the vessel in which St. Paul was sent prisoner to Rome was wrecked on the north point of its entrance. The western part of Malta has little land capable of cultivation, but it abounds with odoriferous plants, and has considerable salt-works. The eastern part, however, which is by far the largest, is very fertile; and in it are cultivated large quantities of cotton, lemons, almonds, olives, and vines. The common people speak Arabic, but the better sort Italian; they are as dark as the natives of Barbary, but without the Arab features; the working classes are described as laborious and frugal; and the Maltese are celebrated all over the Mediterranean for their good and intrepid seamanship. The emperor Charles V., in 1526, gave this island to the order of St. John of Jerusalem, or Knights of Rhodes, who removed thither in 1530; and hence were called Knights of Malta. The island is extremely well fortified; the ditches, of a vast size, are all cut out of the solid rock, and extend many miles. The central position, excellent port, and great strength of Malta, make it an admirable naval station for the repair and accommodation of the men-of-war and merchant ships frequenting the Mediterranean, and render its possession of material importance to Great Britain. As a commercial depôt, also, it is of great value, and there is good reason to believe that it will ere long become the grand entrepôt of the Mediterranean.

A further arrangement was made in 1826, and Great Britain now enjoys all the rights and privileges of sovereign of the island. No town in the kingdom is more distinguished for its public charities; and it has many handsome buildings for amusement and convenience. By the Irwell it has a communication with the Mersey, and all the late various extensions of inland navigation; but its most valuable acquisition is the railway, by which Manchester is brought within an hour's distance of its great warehouse for the raw material, within four hours of Birmingham, and nine hours of the metropolis! Mediterranean Sea, an inland sea that extends between Africa and Europe into Asia; communicating with the Atlantic Ocean by the Straits of Gibraltar, and with the Black Sea by the Strait of Gallipoli, the Sea of Marmora, and the Strait of Constantinople. It is above 2200 miles in length, but has little or no tide, and a constant upper current sets in from the Atlantic, through the Straits of Gibraltar. The Mediterranean Sea was navigated, and its islands occupied, in the remotest antiquity; afterwards by the Phœnicians, Carthaginians, Greeks, and Romans. During the middle ages, and down to the

discovery of America, it was the grand centre of the commerce and navigation of the old world; and within the present century the renewed intercourse with India by Alexandria, the occupation of Malta by the English, and of Algiers by the French, the independence of Greece, and the establishment of steamers between the principal ports of the sea, have prodigiously extended its commerce and navigation. The shores of the Mediterranean were the earliest seats of art, science, and civilisation. In the words of Dr. Johnson, "On those shores were the four great empires of the world; the Assyrian, the Persian, the Grecian, and the Roman. It flows through the kingdoms of Bambara, Timbuctoo, Housa, Trocur, Cassina, and Ghana, to Wangara, where it is said to divide into several branches, and to lose itself in lakes and sandy deserts. It contains many hippopotami and crocodiles, and in the rainy season it inundates the adjacent lands. The course of the Niger was traversed by the enterprising Mungo Park, in 1795, as far as Boussa; but he was there killed, and his papers were lost. Other travellers have been unsuccessful, and some of them equally unfortunate. Lander, the servant of Captain Clapperton (who was murdered near Sacattoo), sailed from Boussa, with the stream, to the mouth of the river, previously called the Nun, in the Bight of Benin; and thus finally identified the Niger and the Quorra.

It stands partly on a steep hill, the summit of which is occupied by the Kremlin, or citadel, containing the gov. offices, two cathedrals, and other public buildings. Nijnii has various manufactures, but it owes its great importance entirely to its commerce; it is, in fact, the grand entrepôt for the internal trade of Russia. The furs of Siberia;

the teas of China; the metallic treasures of the Oural mountains; the silks, shawls, and other merchandise of Central Asia; and the produce of the S. parts of the empire, come thither, up the Kama, from Astrachan; while the manufactured goods of England, the wines of France, the cotton of America, &c. are there conveyed from Petersburgh and Archangel. The great fair held at the splendid bazaars erected on the left bank of the Oka, which is crossed by a bridge of pontoons, has no parallel in the world. It begins on the 1st of July, and continues five or six weeks; the concourse of strangers is immense; and dealers from every civilized country on the globe may there be recognized. This river increases annually, from the middle of June to the middle of September, when it begins to decrease. The fertility of Egypt depends upon the inundations of the waters of the Nile, which are caused by the periodical rains that fall between the tropics. The whole length of the course of the Nile (from Donga) may be estimated at 2000 miles. According to ancient writers, the Nile poured its waters into the sea by seven mouths; but it has now only two, those of Rosetta and Damietta.

Here are several monuments of antiquity, of which an amphitheatre is the principal; there are likewise ruins of a temple of Diana, and a grand tower. But it does not altogether owe its interest to antiquities, having several large and handsome modern edifices. The chief manufactures to this city are silk stockings, shawls, and silk stuffs; but wine, brandy, and vinegar, essences, drugs, and colonial produce, are included in the trade of Nismes; and it is also the entrepôt for the raw silk produced in the S. of France. It is in general a flat country; and the products vary according to the soil and situation; but, on the whole, it is fertile, well cultivated, and produces great quantities of poultry and game. A century ago the greater portion of it was considered scarcely worth cultivation, but, owing to the judicious application of marl, the introduction of the drill husbandry, and an improved rotation of crops, it is now the best farmed county in England! Although the grazing husbandry of Norfolk is not equal to the arable, it greatly excels many counties in that respect also, and the stock of sheep is not far short of 600,000 head. It is from Norfolk and Suffolk that the immense numbers of turkeys are sent to the London markets. The manufactures of Norfolk are worsted, woollen, and silks. It is of a triangular form, 64 m. the greatest length, and 50 the greatest breadth, containing 1,197,410 acres, divided into six wards and 83 parishes, and having 10 market-towns. The east part is fruitful in most sorts of corn, with rich meadows on the banks of the rivers; but the west is heathy and mountainous. The Cheviot hills afford excellent pasture for the peculiar and valuable breed of sheep called by their name; and it may be remarked, generally, that, with all its disadvantages, no county is more distinguished by the late improvements in agriculture than Northumberland. The south-east part abounds with coal-mines, and that which lies to the south-west has rich lead-mines. Pit coal forms the staple produce of the county, and is shipped in vast quantities from the Tyne for the supply of London, &c., and for exportation. Limestone and iron-ore also abound in various places. The chief rivers are the Tyne, Coquet, Aln, and Blyth. Its breadth, which is very unequal, is from 40 to 280 miles; and it is divided into four governments and two provinces. From its rocky soil and northern position, Norway does not produce sufficient corn for its own consumption; but it is rich in pasture, and feeds many cattle, sheep, and goats. The fisheries, particularly on the west coast, find employment and wealth for the natives, and supply the finest sailors for ships of war. There are extensive forests of oak, elm, fir, and pine; and the birch not only supplies fuel, but also a kind of wine. The general exports are tallow, butter, salt, dried fish, timber, planks, horses, oxen, silver, cobalt, alum, copper, and iron. It abounds in lakes and rivers; the former of which are very large. The wild animals are the elk, bear, lynx, wolf, glutton, fox, and hare; but the most singular creature is the lemming, or Norwegian mouse, of a reddish colour, and about five inches long. These animals proceed in vast numbers from the ridge of Kolen towards the sea, devouring every product of the soil in their course, and at last seem to devour each other. The religion of Norway is Lutheranism; all sects of Christians are, however, tolerated; but Jews are excluded from settling in Norway, nor are they even suffered to remain there but a few hours at any time. The language is Danish, with a mixture of Swedish words.

The ancient dukes of Norfolk had a palace here, which is still in existence as a workhouse. Norwich has manufactures of crapes, bombazines, and stuffs of various kinds; in short, it has been celebrated for its manufactures from the time the Flemings first settled here (in the reign of Henry I.), and introduced the spinning and weaving of long woollen stuffs, called "worsted," from the name of the village in which the

The vale of the Trent is famous for its crops of oats, beans, &c.; the other commodities of the county are malt, hops, wool, licorice, woad, and plenty of coal. "The stranger arrived within its walls might fancy himself carried back to a distant century, as he treads its irregular streets, and examines its quaint gable-faced houses." Several of

the churches are highly deserving of notice, as are also its public fountains. Many useful mechanical inventions owe their origin to the ingenious workmen of Nuremberg in by-gone ages; and it had also a very extensive commerce, being a principal entrepôt for the produce of both the N. and S. of Europe. Though greatly declined since that period, it still ranks as one of the principal commercial cities of Bavaria. Ohio, a large river of the United States, which has its source in the Alleghany Mountains, in Pennsylvania, and is called the Alleghany during its SSW. course to Pittsburg, where it receives the Monongahela, and then takes the name of Ohio. After a course of 1180 miles from Pittsburg, in the course of which it receives many large and small rivers, it enters the Mississippi in lat. 36.58 N.—One of the United States of N. America, deriving its name from the magnificent river above described, which forms the whole of its SE. and S. boundary. It is nearly square, the length and breadth being each about 200 miles; it is divided into 73 counties; and it is affirmed to be as healthy as it is productive. The mineral productions are iron, lead, and coal, and rich salt springs. It is crossed near the middle by a chain of hills, where the waters run northward to Lake Erie, and southward to the Ohio. The plains and valleys are allowed to be pre-eminently fertile; there are many rich and extensive prairies, and there are also extensive swamps and marshes. Originally the country was almost covered with forests of large and valuable trees, and in the N. parts of the state these still remain uncleared. A larger quantity of wheat is raised in this state than in any other of the Union, and tobacco is also cultivated with success. Pigs,

fat cattle, sheep, wool, and timber are among its chief products, all to a very great extent; and in manufacturing industry it takes a decided lead among the W. states. The greater portion of its foreign trade centres in New Orleans; and the number of excellent canals in Ohio renders it in internal communication a rival to New York. Columbus is the capital, but Cincinnati is by far its most important town. To show the extraordinary progress that Ohio has made, it is only necessary to state, that in 1790 the population amounted to only about 3000, whereas in half a century from that time (1840) it was 1,519,467—an increase unequalled elsewhere, and almost incredible.

Paris, the metropolis of France, is situate on the river Seine, and, including the suburbs, is about fifteen miles in circumference; the houses are built of freestone, many of them seven stories high, and often contain a different family on every floor. There are nine principal bridges in Paris, but only

three occupy the whole breadth of the Seine, which is not half so large as the Thames at London; also a great number of public fountains, and some triumphal arches. Of the squares, the finest is the Place de Louis XV., which was the scene of the execution of Louis XVI., his consort, and his sister; and the Place Vendôme, in which stands a magnificent bronze column, erected by Napoleon from the cannon taken in a campaign against Austria. Beside the cathedral of Notre Dame, one of the largest in Europe, Paris has many fine churches and abbeys. The university consists of four faculties: divinity, the civil and canon law, physic, and the sciences. The four principal palaces are the Louvre, the Tuileries, the Palais Royal, and the Luxembourg. In the Louvre is the central museum of the arts, in which were deposited the rarest collection of paintings and statues in the world; but the principal of them have been reclaimed by conquest, and were taken away in 1815. The garden of the Tuileries, in front of the palace and on the banks of the Seine, is the finest public walk in Paris. The interior courts of the Palais Royal have been embellished with many beautiful buildings, shops, coffee-houses, and a garden, which render it like a perpetual fair; and the Luxembourg is famous for its gallery of paintings. Paris is legally divided into 12 arrondissements, each comprising certain quarters. It is divided, however, as Mr. H. Lytton Bulwer observes, "into quarters as well by its manners as its laws, and these different districts differ as widely one from the other in the ideas, habits, and appearance of their inhabitants, as in the height and size of their buildings, or the width and cleanliness of their streets. The Chaussée d'Antin breathes the atmosphere of the Bourse, and the Palais Royal is the district of bankers, stockbrokers, generals of the empire, and rich tradespeople; and it is the quarter fullest of life, most animated, most rife with the spirit of progress, change, luxury, and elegance. How different is the quartier St. Germain," &c. &c. Paris, besides being the political capital of France, is one of the chief seats of its industry and commerce; not that it enters into successful rivalry with such places as Manchester, Birmingham, or Glasgow; the articles produced being chiefly those of virtue, jewellery, and the fine arts, or such as more immediately minister to the luxurious wants of a great capital; but these are very considerable indeed. The retail trade of Paris is on a very extensive scale; and its exports have of late years greatly increased. The public libraries, museums, picture-galleries, and literary institutions are both numerous and excellent; the colleges and other educational institutions are conducted on the most liberal scale; and as for theatricals, Paris may properly be regarded as the dramatic capital of Europe. The hospitals and charitable institutions are numerous, and supported by the government. In the environs of the city are excellent freestone and abundance of gypsum; and its principal manufactures are tapestry, mirrors, and carpets. Without the Barrière d'Enfer is the entrance to the Catacombs, which consist of many caverns and excavations that extend

several miles in every direction. The principal cavern contains upwards of 2,500,000 skulls, with a proportionable number of the other bones; these are ranged along the various avenues, and so closely packed as to form solid walls; the outer surface consisting of the ends of thigh-bones, with skulls so intermixed as to form crosses, squares, waving lines, &c. After much opposition, a favourite project of Louis Philippe's has been carried into effect, and Paris has been surrounded on all sides with a continuous chain of fortifications, which may be used either to resist an invading enemy, or to overawe the inhabitants in case of internal tumult. Lon. 2.22 E., lat. 48.50 N. Pop. about 920,000.—A town of Kentucky, chief of Bourbon county, U. S.

In 1801 Parma was ceded to the French; and in 1814 it was assigned to the Empress Maria Louisa.—The capital is a fortified city of its name, which has a magnificent cathedral, a university, and several handsome churches, adorned with paintings by the famous Correggio, who was a native of this place. Persepolis, anciently the capital of the Persian empire, and, in the time of Cyrus,

superior to any other city of the East. It was taken by Alexander the Great, who, in a drunken revelry, (as some authors say, while others describe it as a retaliatory act for similar conduct on the part of the Persians,) set the palace on fire; and the city afterwards became desolate. "The history of Persepolis," says Mr. McCulloch, "is, for the most part, hidden in obscurity; but it seems to be an established fact that this city is identical with the *Istakhar* of Persian historians, the foundation of which is ascribed to Cyrus the Great, the *Jemshedd* of Oriental writers." A great quantity of colossal ruins still exist, as the remains of vast portals, columns, sphinxes, tombs, &c.

Persia, a large country of Central Asia, consisting of several provinces, which, at different times, have been independent governments. Persia may be considered as an elevated plateau, diversified by many clusters of hills, chains of rocky mountains, extensive plains, and barren deserts; and it may be thus described: in the north part it is mountainous and cold; in the middle and south-east parts, sandy and desert; in the south and west, level and extremely fertile, though for several months very hot. The chief rivers are the Euphrates, Tigris, Kur, Kizilozzen, and Herauz. The soil produces not only pulse and corn, but affords oil in abundance, senna, rhubarb, and the finest drugs; and there are mines of silver, copper, lead, iron, and salt. Here are also dates, pistachio-nuts, and poppies that produce the finest opium; cotton, indigo, and tobacco are also raised; and no country can exceed this in the variety of its flowers and flavour of its fruits. But it also contains immense sandy wastes and salt deserts; nothing, indeed, can be more sterile and cheerless than the boundless expanse that presents itself to the eye, all hoary, as it were, with a saline efflorescence.

The camels, horses, mules, asses, oxen, and buffalos, are each among the best of their kind, and large flocks of sheep and goats are kept by the wandering tribes. The principal manufactures are satins, tabbies, taffetas, brocades, gold tissues, gold velvet, carpets, calicos, camlets, and fire-arms. The principal trade of Persia is with India, Turkey, Russia, Bokhara, Afghanistan, and of late years also direct with England. The Persians are generally Mohammedans, of the sect of Ali, and more tolerant in their principles than the Turks. They are rather inclined to corpulence, have black hair, a high forehead, aquiline nose, full cheeks, and a large chin. The men are strong, robust, and fond of martial exercises; they shave the head, but the beard is held sacred, and almost universally dyed black. The Persians are generally gay, polite, and hospitable; yet are reckoned treacherous and cruel. They are passionately fond of tobacco, which they smoke almost incessantly; but never drink wine before company, though in private they indulge to excess. Without presents no inferior can approach

a superior; and the donation, being supposed to confer honour, is made in the most public manner possible. They do not recline on cushions, in the luxurious manner of the Turks, but sit in an erect posture on thick felt, called a *numud*. The females cover the head with a large black turban, over which a Cashmerian shawl is thrown; and their robes are rather shorter than those of the men, fastened in front by large gold buttons. The wives of the rich pass their time in visiting their friends, and amusing themselves; but the bath is the principal scene of their enjoyment and relaxation. Like the Moham-medans, the Persians are restricted to four legitimate wives, but they may have as many concubines as they please. The Persian language is celebrated for its strength, beauty, and melody; and they write it from the right to the left with great expedition.

The country exhibits scenes of rugged and striking magnificence, contrasted with the most beautiful marks of cultivation. The Grampian Mountains cross it from south-west to north-east, the highest of which is Benlawers. "Its lakes and rivers are also on a grand and varied scale; and its climate is as different as its surface, being severe in the more elevated, and mild and early in the lower districts. The contrast in the inhabitants is equally great; the Celt being found on the mountains and the Saxon on the plains, and each differing from the other in language, dress, and manners." The principal rivers are the Forth and Tay. Total pop. 138,151.

Peru, a republic of S. America, formerly the richest and most extensive kingdom in that country, and long celebrated for its gold and silver mines, from which immense wealth has been drawn. Its extreme length is about 1500 miles, the breadth varying from 40 to 600. It is remarkable for the lofty and magnificent Andes and Cor-

dilleras, parts of which are covered with all but interminable forests, while other parts are clothed with short fine grass, and the valleys, which are very extensive, enjoy all the advantages of the best climates of the temperate zone. Peru, however, is more subject, perhaps, than any other country, to the tremendous visitation of earthquakes. The lama is peculiar to this country, and in form bears some resemblance to a camel, but in size is little larger than a sheep; its wool furnishes the Peruvians with clothing, and its flesh with food. Peru is inhabited by the Spaniards, the native Americans, and a mixture arising from both, called Mestizos. The native Americans, who live among the forests, go naked, and paint their bodies with a red drug, called *rocu*; and they have no beard nor hair on any part of their bodies except their heads, where it is black, long, and coarse. When the Spaniards first landed in Peru, they found it governed by sovereigns called Incas, who were looked up to by their subjects with awe and veneration; and the inhabitants were distinguished for their mild and polished manners. But the avarice of their European conquerors led to scenes of blood and desolation, and the Peruvians became the victims of the most unheard-of cruelties.

Petersburg, or *St. Petersburg*, the metropolis of the empire of Russia, in a gov. of the same name, with a university. It is seated on the Neva, near the Gulf of Finland, and built partly on some islands formed by the river, and partly upon the continent. It owes its existence to the power and genius of Peter the Great, who first began the city by the erection of a citadel with six bastions, in 1703, and in less than nine years the seat of empire was transferred to it from Moscow. The streets are straight, and generally broad and long; some have a gravel walk along the middle, shaded by poplars, and canals pass through many of them, by which the inhabitants are supplied with water. The river Neva, by which the city is intersected, is deep, clear, and rapid; and the main stream is broader than the Thames at London. In several parts wooden houses, scarcely superior to common cottages, are blended with the public buildings; but the mansions of the nobility are vast piles of building, furnished in the most elegant style; and the public edifices are of magnificence agreeing with the mighty concerns of this vast empire. Among the ornaments of Petersburg is an equestrian statue of Peter the Great, in bronze, of a colossal size; the pedestal of which is a gigantic rough block of granite, brought to the spot at a great expense. There is also a splendid column erected in honour of the emperor Alexander, 150 ft. in height; the pedestal is of granite and bronze; the shaft of the column consists of a single piece of red granite, 84 ft. in length, and 14 ft. in diameter. Within the walls of the citadel is the church of St. Peter, in which are deposited the remains of several of the sovereigns, but the principal church is that of the Holy Virgin of Kasan, named after the province of Kasan, the first in the empire that embraced Christianity. There are upwards of 40 other churches, appropriated to the national religion and those of different sects, which are tolerated without any restrictions. Petersburg has a considerable trade in exporting the products of the empire, and also a communication by canals and rivers with many of the southern provinces as far as Astracan, on the borders of the Caspian Sea. This country was first discovered in 1517, and settled by the Spaniards in 1553. It was long dependent on Peru; but, in 1778, was erected into a viceroyalty. In 1806 the English made an unsuccessful attempt to establish themselves in Buenos Ayres; in 1810 the revolutionary movements began; and in 1816 the united provinces threw off their dependence on Spain, and the federal capital was transferred to Buenos Ayres. Since that time La Plata has been several times involved in disputes with Brazil, France, and Bolivia, so that its prosperity has been retarded; but the natural resources are great, and there is every prospect of its becoming a flourishing country. Poland, formerly an independent and extensive country of Europe; but the existing kingdom, or rather province, of Poland, now united to the Russian empire, is of comparatively limited dimensions. After many ineffectual struggles to maintain the independence of Poland, as a nation, against the aggrandising views of Prussia, Russia, and Austria, who had severally planned its conquest from the year 1772, it was at length, in 1798, divided among its enemies: Austria had a part of Little Poland, and the greater part of Red Russia and Podolia, which is now called the kingdom of Galicia; Prussia had Great Poland, Polish Prussia, a small part of Lithuania, and Podlachia; and Russia had Samogitia, the remainder of Lithuania, Volhinia, and Podolia. Still Poland remained a prey to all sorts of disorders, and in 1794 the Poles rose in rebellion under Kosciuszko, who, after displaying prodigies of valour, was defeated and taken prisoner; and a dismemberment of the remaining territories thereupon took place. The present kingdom of Poland originated in the grand duchy of Warsaw, established by Napoleon in 1807. It was assigned to Russia by the Congress of Vienna, and obtained from the emperor Alexander a representative constitution. In 1830, however, the Poles revolted against the emperor, wishing to separate, and re-establish their former independence; but in this they eventually failed, and the arrangements made at the congress of Vienna were again confirmed. The towns of Poland are for the most part built with wood; and the villages consist of mean cottages or huts. The Poles are a remarkably fine race of people,

and are said to resemble the western Asiatics rather than the Europeans, being probably of Tartar origin. The inhabitants of both sexes are in their morals at nearly the lowest point of debasement; for licentiousness and sensuality prevail to a degree unknown in any other part of Europe. The country is so fertile in corn that it supplies Sweden and Holland with large quantities; nay, for a lengthened period Poland has been the granary of a great part of Europe; and it has also extensive pastures. Peat, ochre, chalk, belemnites, agate, chaldedony, cornelians, onyxes, jasper, rock crystals, amethysts, garnets, topazes, sapphires, and even rubies and diamonds, are found; also talc, spar, lapis calimmaris, coal, iron, lead, and quicksilver. Here is much leather, fur, hemp, flax, saltpetre, alum, manna, honey, and wax; and there are mines of salt, of a great depth, out of which is dug rock salt. Horses are numerous, very strong, swift, and beautiful; and horned cattle are bred in great numbers. The principal rivers are the Dnieper, Vistula, Dwina, Niemen, Dniester, Bog, and Bug. Warsaw is the capital.

Polynesia, the name applied by modern geographers to the circuit that includes those numerous islands in the Pacific Ocean extending eastward from the Philippine Islands and New Guinea to the coast of America. The whole of Polynesia may be considered as a series of submarine mountain ranges, and in many of them are distinct traces of volcanic action: it is, indeed, supposed that they are nothing more than the crests of submarine volcanoes, having the rims and bottoms of their craters overgrown with coral. They afford an extremely diversified vegetation; and among the many plants covering their surface are some of high utility for human support, especially the bread-fruit tree, the cocconut, the banana, plantain, and sugar-cane. The habits of the natives are gross and sensual; in some of the islands cannibalism still exists, and the practice of tattooing the body prevails more or less in all of them.

Speaking of the buildings, &c. which have been discovered in this subterranean city, Mr. Maclaren observes, that "the impression it gives of the actual presence of a Roman town, in all the circumstantial reality of its existence 2000 years ago, is so vivid and intense, that it requires but a small effort of imagination to place yourself among the multitudes which once thronged its streets and theatres, and occupied its now voiceless chambers."

Portsea, an island between Portsmouth harbour and Langstone harbour, in Hampshire; separated from the mainland on the N. by a creek, over which are two bridges, one for the entrance and the other for the departure of passengers. It is now become a very populous and trading place, deriving great advantages from the number of hands employed in the dock-yard, who all reside here or in the immediate neighbourhood. The town of Portsea has, in fact, entirely grown up since the beginning of last century, on a tract formerly called Portsmouth Common, and now greatly surpasses Portsmouth in extent and population.

Portsmouth, including its suburb of Portsea, a parliamentary borough, and a celebrated sea-port town in Hampshire, being the principal naval arsenal of Great Britain, and the grand station for the fleet. Its coasts are well defended, at numerous points, by strong military works, including, together with the fortifications of Portsmouth itself, Fort Cumberland, Southsea Castle, &c. Its capacious harbour is made by a bay running up between the Island of Portsea, on which the town is situate, and the opposite peninsula, having a narrow entrance commanded by the town and forts. The importance of Portsmouth, indeed, depends wholly on the excellence of its harbour, and on its convenient situation as a place for the outfit and rendezvous of the fleets in the Channel. Within the harbour there is water sufficient to float the largest men-of-war at any time of the tide. The anchoring ground is so good and free from obstructions, that ships lie as securely in it as if they were in dock. Its spacious docks, arsenals, storehouses, barracks, &c., are all kept in the most perfect order; and the machinery, worked by steam, for the making of blocks, forging anchors, &c., is, perhaps, the most perfect and curious thing

of the kind in the world. To the south of it is the noted road of Spithead, where the men-of-war anchor when prepared for actual service. Lon. 6.6 W., lat. 50.47 N. Pop. 9354; or, incl. Portugal, a kingdom situate at the most western point of Europe, and divided into the provinces of Estremadura, Beira, Entre Douro e Minho, Tras-os-Montes, Alentejo, and Algarve. Corn is not plentiful, for little attention is paid to husbandry; and maize, imported from Africa, is used by the peasants instead of wheat; but there is abundance of olives, vines, oranges, lemons, nuts, almonds, figs, and raisins; and it is famous for excellent wines. The foreign trade consists in sugar, tobacco, rum, cotton, indigo, hides, Brazil and other woods for dyeing, and many excellent drugs. There are mines of iron, copper, tin, and lead, quarries of marble, and some precious stones. The principal rivers are the Tagus, Douro, Guadiana, Minho, and Mondego. The Portuguese are indolent, and spend all their wealth in the purchase of foreign luxuries. The established religion is the Roman Catholic, but the public morals appear to have benefited very little from it. Lisbon is the capital.

Prussia, an important European kingdom, the principal part of which lies along the south shore of the Baltic, but many portions of the inland frontier almost entirely surround certain small independent states; and exclusive of this principal portion, there is an extensive Prussian territory on both sides of the Rhine, which is separated from the rest of the monarchy by Hesse Cassel, part of Hanover, Brunswick, &c. Formidable as Prussia undoubtedly is, the disjointed state of the dominions detracts materially from her power; Russia, Austria, and France being alike able to bear upon them from different quarters to which they respectively have easy access. The Prussian monarchy is divided into 8 provinces, and these again into 25 regencies, which are farther subdivided into 335 circles. The names of the provinces are Prussia, Posen, Brandenburg, Pomerania, Silesia, Saxony, Westphalia, and the Rhine. The general surface of the country is that of vast plains, much of which until lately was covered with immense forests. Besides the Rhine, the Vistula, the Elbe, and the Oder, Prussia is watered by the Pregel, Niemen, Ems, Moselle, Spree, &c. There are also numerous lakes, and several large lagoons, communicating with the sea by narrow mouths. The country produces a great deal of timber, flax, hemp, tobacco, and corn; iron, silver, copper, lead, and coal are among its mineral products, and much amber is found on the sea-coast. The domestic animals are numerous; and, besides the common game, there are elks, wild asses, and bisons in the forests; the last are of a monstrous size, and their hides are sold to foreigners at a great price. The inhabitants are industrious, robust, and good soldiers; they are a mixture of different nations, comprehended under the denominations of Prussians, Poles, and Lith-

anians. The obligation of military service is universal, every man being obliged to enter the army of the line, or the *landwehr*, between the ages of 20 and 32, and to serve in the one or the other for three years: in case of invasion the *landsturm*, or levy *en masse*, is called out. The Lutheran religion is the most prevalent, but all religious sects enjoy liberty of conscience. The chief manufactures are glass, iron, copper, brass, gunpowder, porcelain, jewellery, watches, paper, cloth, linen, and stockings. An immense quantity of beer and spirits is produced and consumed in Prussia, the consumption being four times as much per individual as is drank in the United Kingdom of Great Britain and Ireland!

He says of the churches that they were the most sumptuous he had ever seen. "Those of Milan, Genoa, and Rome are built in better taste; but in the expensive interior decorations, the quantity and value of the ornaments of the altar, and the richness of the vestments, they are far surpassed by the churches of Puebla and Mexico." The articles of traffic are cloth, fruit, soap, cotton manufactures, fine earthenware, and all kinds of iron and steel work. Lon. 98.3 W., lat. 19.0 N. Pop. 50,000.

Rhine, one of the largest rivers on the continent of Europe. The first two torrents united are called the Lower Rhine, which receives the Upper Rhine at Richenan; and the height is here about 6180 feet above the sea. It was the ancient boundary of Gaul and Germany, and is still the natural barrier of modern Germany and France. In its course towards the Zuyder Zee it branches into four streams, and that which retains the name of the Rhine flows towards Leyden, and enters the sea by a sluice at the village of Catwyck. The scenery of the Rhine is justly admired by travellers, particularly between Mayence and Coblenz. "The Rhine," says Mr. Leitch Ritchie, "here pursues a meandering course, pent between lofty and craggy mountains, and resembles rather a succession of lakes than a river. These mountains, however, are after all only mountains in miniature. They have often, indeed, the steepness, rudeness, and overhanging ridges of the mountains bordering the Rhone; but as compared to them in size, they are as molehills. The groves on the hill sides are few and far between; but there is no grove without a church spire rising in the midst and overtopping the trees. Frequently a daring and fantastic cliff, crowned by an ancient castle, frowns over the river, or rises majestically from the brow of the steep; but the woods, unlike those of the Rhone, look like plantations, and the vines obtrude an unceasing idea of the artificial." In a commercial point of view the Rhine is perhaps the most important river in Europe, owing to the numerous states to which it affords a water conveyance, and the great facilities given to its free navigation.

Rome, a city of Italy, formerly the most renowned, and emphatically styled the "Mistress of the World," situate in the Campagna di Roma, forming the capital of the Ecclesiastical State, and being the residence of the Pope. It is built on seven hills and the intermediate valleys, along the banks of the Tiber, over which it has four bridges. Some of the principal streets are of considerable length and perfectly straight, in which are splendid palaces and houses belonging to the nobility; there are also many piazzas, which are adorned with noble fountains or obelisks. But the generality of the streets

are mean-looking, and the houses have a shabby dilapidated appearance; in short, the stranger's attention is continually divided between what is grand and what is filthy. The church of St. Peter, which was finished in 1621, is entirely covered, both within and without, with marble. The length is 730 feet, the breadth 520, and the height, from the pavement to the top of the cross that crowns the cupola, 450. The Pantheon, erected above 120 years before the Christian era, to the honour of all the gods, is the most perfect of the Roman temples that now remain; but the Colosseum is the most stupendous monument of antiquity. The Pope has three superb palaces, of which the principal is the Vatican, near St. Peter's Church: the library of this palace is deemed the largest and richest in the world. Besides the university, which consists of several colleges, there are numerous academies, literary societies, &c. &c. [See *Ecclesiastical State*.] Lon. 12.29 E., lat. 41.54 N. Russia, a most extensive empire, partly in Asia, and partly in Europe, besides a very large tract in the NW. part of America, the Aleutian islands, Nova Zembla, &c. This empire forms a square, whose sides are upwards of 2000 miles each: it includes, in fact, nearly one-seventh part of the land on the terrestrial globe; but not a third of the country is sufficiently peopled, or properly cultivated. The principal rivers are the Dnieper, Volga, Don, Dwina, and Oby, which, owing to the flatness of the country, afford great facilities to internal navigation. The lakes are numerous, and, like the rivers, are upon a most gigantic scale. So vast is the extent of the Russian empire, and so various its climate, that when spring commences in one part, another is experiencing all the rigours of winter. Medicinal and saline springs are not uncommon; and there are mines of fine silver, copper, iron, and other minerals. There are manufactures of leather, linen, woollen-stuffs, velvet, and silk; brass, iron, steel, and tin are also wrought. The home commodities are sables, black furs, the skins of foxes, ermines, lynxes, lynxes, bears, panthers, wolves, martens, white hares, &c.; iron, talc, tallow, wax, honey, corn, potash, tar, linseed and train oil, castor, isinglass, hemp, flax, thread, Siberian musk, soap, feathers, timber, &c. To these commodities may be added almost all the merchandise of China, India, Persia, Turkey, and some European countries. The established religion of the government is that of the Greek church; but a considerable number of Russians profess the Mohammedan religion, and a greater number are still Pagans. The language is an improved version of the Slavonian; and the letters of the alphabet have a great resemblance to the Greek characters. The Russians, in general, are robust, well-shaped, and of pretty good complexion. The dress of the higher ranks is after the French and English fashion; and all wear a covering of fur six months of the year. Persons of both sexes wear a cross on their breasts, which is put on when they are baptized, and never laid aside while they live. The sovereign of Russia is absolute and despotic in the fullest sense of those terms. The first who bore the title of czar was Basil, son of Basilides, who freed his country from its subjection to the Tartars, about the year 1470. The title of emperor was first assumed by Peter I., who, by his actions, justly acquired the surname of Great, and finished his glorious course in the year 1725. From this period Russia has progressively advanced in arts, arms, and civiliza-

tion; and since Napoleon vainly attempted to subjugate this colossal power, and Alexander became his conqueror, a vast accession of influence and consideration has been given to Russia, which under the present emperor have been maintained and extended. Petersburg is the metropolis of the empire.

It is divided into the circles of Dresden, Leipsic, Zwickau, and Budissin. The climate is mild, the land well cultivated, and considerable quantities of fruit are grown. Its breeds of sheep are among the finest in Europe, and, notwithstanding our rapidly increasing importations of wool from Australia, the greater portion of the wool we import comes from Saxony. Vast herds of cattle are also bred here, and the quantity of butter that is made is immense. In mineral riches few parts can equal it; mining is, consequently, one of the principal occupations of the inhabitants. Silver, iron, lead, bismuth, arsenic, antimony, and manganese are the principal metals; serpentine marble and fine building stone are abundant, as are also various gems; and the neighbourhood of Meissen yields the fine porcelain clay of which the Dresden china is made. The weaving of cotton and linen is an important branch of their manufacturing industry, and great advances have of late been made in yarn and woollen fabrics. Saxony is an hereditary and limited monarchy. In 1830 hereditary jurisdictions were generally abolished, and a successful inroad made on the feudal system, which until that time was maintained in the rural districts with little modification. Saxony was only an electorate till 1806, when Napoleon erected it into a kingdom; and, as the king remained a firm ally of the French emperor, the latter made extensive additions to his dominions. Not until after the battle of Leipsic did he abandon his old and powerful benefactor; and it was only owing to the opposition which the emperor of Austria gave to the plan of dismembering Saxony, that it now exists as a separate state, as it was, some of its most valuable provinces were assigned to Prussia. One of the most disastrous events of this kind happened in 1707, when three men-of-war perished, with Admiral Sir Cloudesley Shovel, and all their crews. These islands are generally supposed to be the *Cassiterides*, or tin islands of the ancients, though there is now no trace of tin, nor of mines of any sort. Sea-fowl are found in great numbers, and also partridges. Pop. 2582.—There is also a group of isles or shoals, called by the same name, in the Pacific Ocean: they were discovered by Captain Wallis in 1767, and are described as very dangerous to navigators.

Scotland, the northern portion of the Island of Great Britain, and forming one of the three great divisions of the United Kingdom of Great Britain and Ireland. It is bounded on the north by the North Sea, east by the German Ocean, south by England and the Irish Sea, and west by the Atlantic Ocean. To Scotland also appertain the islands on its west coast, called the Hebrides, or Western Islands, and those to the north-east, called the Orkney and Shetland Islands. From north to south it extends 270 miles, and the greatest breadth is 150, but in some places not above 30; and no part is distant above 40 miles from the coast. It contains 29,167 square miles, or 18,666,880 acres, divided into 33 counties. Scotland is separated into two districts, the Highlands and the Lowlands: the former is applied to the mountainous part to the north and north-west of the Grampian Hills, and the latter to the more level district on the east and south-east. The coasts of Scotland are bold and rocky; and they are generally much indented by arms of the sea, termed friths and lochs, which extend far inland, and are of considerable importance in a commercial point of view. The principal rivers are the Spey, Don, Tay, Tweed, Clyde, Forth, Northern Dee, Esk, Annan, Nith, and Southern Dee; many of which team with the finest salmon, trout, and other fish. The lochs, or freshwater lakes, are numerous, and some of them extensive. The climate is very various. The northern extremity is severely cold; but, from its insular situation, the frosts are far from being so intense as in parts of the continent no farther to the north. The products of the country are grain, flax, woods of oak and fir, coal, lead, iron, freestone, limestone, slate, the most beautiful marble, fine rock-crystals, pearls, variegated pebbles, &c. It feeds vast herds of cattle and flocks of sheep; they are both small, but much valued for the delicacy of their flesh; and the fleece of the latter emulates the finest Spanish wool. In agriculture, as in manufactures, Scotland has of late years made a rapid progress,

and the condition of the Inhabitants has improved immensely during the present century. The established religion is the Presbyterian.
